1. Introduction

EDSDK stands for EOS Digital Camera Software Development Kit. EDSDK provides the functions required to control cameras connected to a host PC, digital images created in digital cameras, and images downloaded to the PC. This document describes the collection of functions implemented in the EDSDK library.

EDSDK provides an interface for accessing image data shot using a Canon EOS digital camera. Using EDSDK allows users to implement the following types of representative functions in software.

- Allows transfer of images in a camera to storage media on a host PC.
- Allows RAW images to be processed and saved in JPEG format.
- Allows remotely connected cameras and the image being shot to be controlled from a host PC.

1.1 Basic Topics

EDSDK provides a C language interface for accessing Canon EOS digital cameras and data created these cameras. EDSDK is designed to provide standard methods of accessing different camera models and their data. Using EDSDK allows users to implement Canon EOS digital camera features in software.

There are two versions of EDSDK. One runs under a Windows environment, while the other runs under a Macintosh environment.

1.2 Supported Environments

EDSDK can be used on system configurations such as shown in the table below.

1.2.1 Target Environment

| Windows | |
|-----------|---|
| OS | Windows 2000, XP (Home / Professional), Vista, 7 |
| Memory | 128 MB or more (256 MB or more when using XP) |
| Hard disk | 50 MB or more available storage |
| Interface | USB2.0 or IEEE1394 |
| Macintosh | |
| OS | Mac OSX 10.4-10.6 (10.4.7 or later on Intel-based Macintosh) (All camera cannot be used with Mac OS X 10.5.6 and EOS 5D cannot be used with Mac OS X 10.5.1,10.5.2) |
| Memory | 256 MB or more |
| Hard disk | 50 MB or more available storage |
| Interface | USB2.0 or IEEE1394 |

1.3 Supported Cameras

Supports models beginning from the EOS 1D Mark II.
The following models are supported as of October 2008.

EOS-1D Mark II
EOS 20D
EOS-1Ds Mark II

1.4 Installing EDSDK

1.4.1 Including Header Files

The following files are required in order to use the EDSDK using C/C++ language.

EDSDK.h, EDSDKTypes.h, EDSDKErrors.h

Windows:

Be sure to copy the three header files listed above into the header access folder of the development environment.

Be sure to add them to the application project workspace.

*Since these are C language header files, it is necessary to provide header files depending on the programming language.

Macintosh:

Be sure to include the three header files listed above.

1.4.2 Linking the Library

After header files are included, it is necessary to link the EDSDK library as described below.

Windows:

There are two methods of linking EDSDK: one where EDSDK.lib files are copied to the folder specified by a development environment library path and EDSDK.lib is specified as an import module, and another where EDSDK.dll is loaded by the LoadLibrary function.

When loading EDSDK.dll, get pointers to each EDSDK function using the GetProcAddress function and assign them to function pointer variables. When calling each EDSDK function, make the call via the function pointer variable obtained here.

Macintosh:

Add EDSDK.framework and DPP.framework to Groups&Files.

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

1.4.3 Executing the EDS SDK Client Application

Windows:

All DLLs are required in order to execute an EDS SDK client application.

Notes: Do not copy the collection of EDS SDK library files to the system folder or extension folder.

Macintosh:

Place EDS SDK.framework in an application directory such as Contents/frameworks/.

It is also possible to load “EDS SDK.framework” as a source file. The following code has been written as an Objective-C source.

```
-(id)init {
    // START to Load EDS SDK.framework -----
    NSString *symName = @"EDS SDK.framework" ;
    int i;
    NSArray *array = [NSBundle allFrameworks];
    void *symData = NULL;

    for (i = 0; symData == NULL && i < [array count]; i++) {
        NSBundle *framework = [array objectAtIndex:i];
        NSString *bundleID = [framework bundleIdentifier];
        if (bundleID) {
            CFBundleRef bundle = CFBundleGetBundleWithIdentifier((CFStringRef) bundleID);
            if (bundle) {
                symData = CFBundleGetFunctionPointerForName(bundle, (CFStringRef) symName);
            }
        }
    }
    // END of Loading EDS SDK.framework -----

    EdsError err = EDS_ERR_OK ;
    err = EdsInitializeSDK();
}
```

Notes: Do not copy the EDS SDK framework file to the system folder.

| | | | |

2. Overview

2.1 Protocol for Remote Connection

Two types of protocol are used by EOS Digital to connect to a host PC. EDSDK client applications can basically communicate with remotely connected cameras without any awareness of the difference between protocols.

2.1.1 Type 1 (Legacy Protocol)

Legacy protocol is an original protocol from Canon for connections between a host PC and camera. This protocol is incorporated into cameras up to EOS5D and in EOS (EOS1 series) cameras with an IEEE1394 interface. A special device driver for the connected camera must be installed on the host PC in order to connect using this protocol. Be sure to install this driver beforehand from the CD-ROM supplied with Canon cameras or by downloading from Canon's homepage. (The required driver is installed in EDSDK.framework under Macintosh environments.)

Cameras which use a Type 1 protocol as standard such as EOS 1DMark II N are called "Type 1 protocol standard cameras" in this manual.

2.1.2 Type 2 (PTP)

PTP is an abbreviation of "Picture Transfer Protocol." PTP is a standard protocol used to transfer images to a PC. This protocol is incorporated in EOS digital cameras that include a USB interface starting with EOS Kiss Digital N (EOS 350D/REBEL XT). A device driver for each model is unnecessary when connecting to an OS that supports PTP. (However, a device driver for making PTP connections is required when using an OS which does not support PTP as standard such as Windows 2000. This driver can be obtained from the CD-ROM supplied with Canon cameras or by downloading from Canon's homepage.)

Type 1 protocol has been eliminated from cameras with a USB interface starting from EOS30D and Type 2 protocol is utilized as that standard.

Cameras that use Type 2 protocol as standard such as EOS30D are called "Type 2 protocol standard cameras" in this manual.

EOS Kiss Digital N , 350D, REBELXT, and EOS 5D model cameras come shipped from the factory with communications set for [Print/PTP] but functions that support PC connections are limited. For example, capture-related features cannot be used. Since these cameras use [PC connection] (Type 1 protocol) as the standard for connecting to a PC, they are Type 1 protocol standard cameras.

| | | | | |
| | | | | |
| | | | | |

2.4 EDSDK Objects

As shown in Figure 1-3, EDSDK employs a hierarchical structure with a camera list at the root in order to control and access cameras connected to the host PC. This hierarchical structure consists of the following elements: camera list, cameras, volumes, folders, image files, audio files, etc.

These elements are treated as belonging to one of the following object categories: **EdsCameraListRef**, **EdsCameraRef**, **EdsVolumeRef**, and **EdsDirectoryItemRef**. Having a hierarchical structure, these four objects may have child objects.

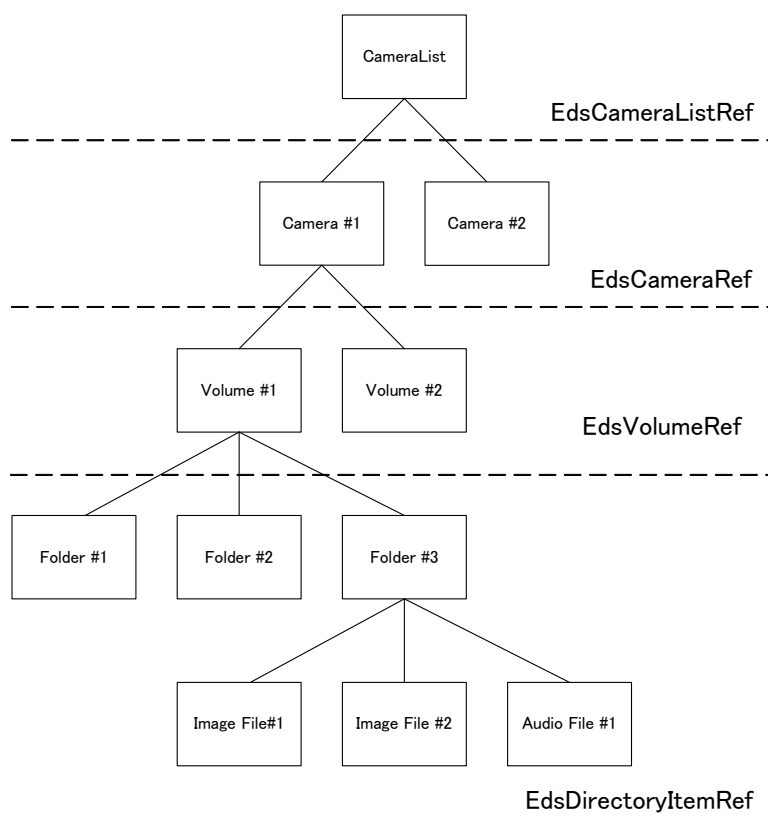

Figure 2-3 Hierarchical Structure of EDSDK Objects

Although the four objects shown above are used to access connected cameras, on an image file is transferred to the host PC, the object used to control that image changes even if it is the same image file.

As shown in Figure 1-4 below, the **EdsStreamRef** object is used to control input/output when transferring images from the camera to the host. Then **EdsImageRef** is used to control the image file transferred to the host. This is due to the fact that operations differ for an image file is stored in the camera versus an image file stored on the host.

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Figure 2-4 Changes in Controlled Objects

Bringing together the above information, the following objects can be handled using the EDSDK.

(1) **EdsCameraListRef**

This object represents an enumeration of the cameras remotely connected to the host PC by IEEE1394 or USB interface. This object can be used to select the camera to be controlled from among the cameras currently connected with EDSDK client application. This object can also be used when getting an EdsCameraRef child object.

(2) **EdsCameraRef**

This object represents a remotely connected camera. This object is used to control the camera or to get an EdsVolumeRef object when accessing the memory card, which is a child object of the camera.

(3) **EdsVolumeRef**

This object represents the memory card inside the camera. If the camera model allows two memory cards to be installed at once, as with the EOS1 line of cameras, the EdsVolumeRef object represents one memory card each. This object is used to get an EdsDirectoryItemRef object, which is a child object, when performing operations on a file or folder on the memory card.

(4) **EdsDirectoryItemRef**

This object represents a file or folder on the camera. When files are downloaded from the camera, each file to be downloaded is treated as one of these objects.

(5) **EdsImageRef**

This object represents image data. This data is obtained from image files. This object is used to retrieve and control information included with an image such as thumbnails and parameters.

(6) **EdsStreamRef**

This object represents the file I/O stream. An open stream on the host PC can be specified as the download destination when downloading files in the camera to the host PC. Streams are also used when loading image files stored on the storage media of the host PC into an EDSDK client application. Furthermore, EdsStreamRef objects can also be created in memory.

(7) **EdsEvfImageRef**

This object represents PC live view image data. When using a camera model that supports live view, live view image data set can be downloaded from the camera. Information such as zoom and histogram data is

| | | | | |
| | | | | |
| | | | | |
| | | | | |

2.5 Object Management

2.5.1 Object Management Using a Reference Counter

Applications built using the EDSDK carry out object management using a reference counter.

EDSDK stores a reference counter for all objects. The reference counter is set to 1 when an object has been allocated. The developer increases the reference counter by 1 at the point that the object is required by the program, and lowers it by 1 when the object is no longer needed. When a reference counter reaches 0, the associated object is automatically deleted by the EDSDK. The developer must, therefore, explicitly declare that an object is being referred when it is required by the program. EdsRetain and EdsRelease are provided as APIs for controlling object reference counters.

2.5.2 Releasing Resources when Exiting the Library

Applications built using the EDSDK will release all allocated resources when EdsTerminateSDK is called.

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

2.6 Properties

Properties are stored under EDS SDK for camera and image objects. For example, properties may represent values such as camera Av and Tv. The functions **EdsGetPropertyData** and **EdsSetPropertyData** are used to get and set these properties. Since this API takes objects of undefined type as arguments, the properties that can be retrieved or set differ depending on the given object. In addition, some properties have a list of currently settable values. **EdsGetPropertyDesc** is used to get this list of settable values. For details on types of properties, the objects they are associated with, and the role they play, see [Properties](#).

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

2.7 Camera Status

Cameras remotely connected to the host PC can be in one of several states: UI lock, UI lock release, direct transfer, and direct transfer release. Camera state transitions are shown in the figure below.

(1) UI Lock

In this state, all operations of the camera unit are disabled and only operations from the host PC are accepted. This allows data and instructions to be safely sent from the host PC to the camera.

(2) UI Lock Release

In this state, operations of the camera unit are enabled. Although data and instructions can be sent from the host PC to the camera in this state, conflicts may arise.

(3) Direct Transfer (for models such as the EOS30D with an Easy Direct button)

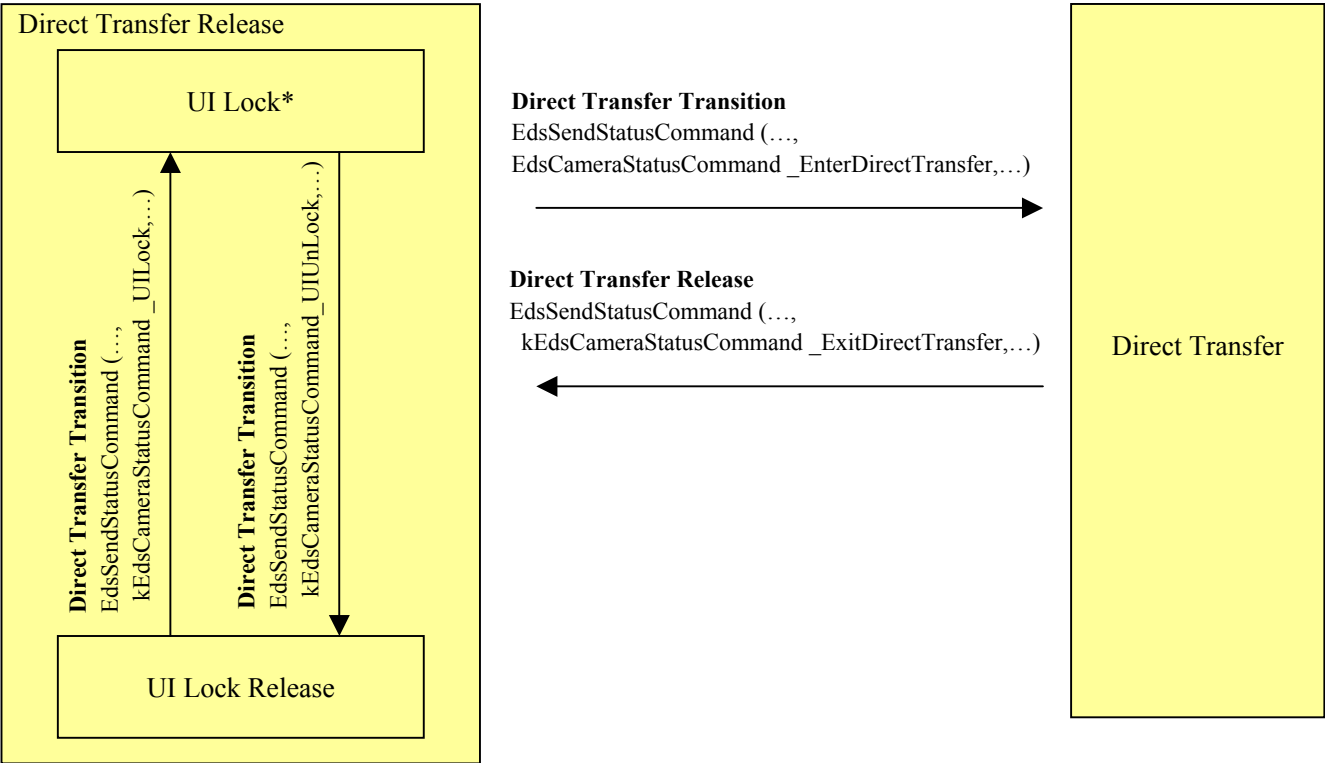

In this state, the camera is currently directly transferring data. Available camera operations are limited to those functions related to the direct transfer. It is possible to send instructions from the PC to the camera in this state.

A direct transfer request event notification (kEdsObjectEvent_DirItemRequestTransferDT) is issued to the EDSDK client application connected to the camera when an operation for starting image download is initiated using camera controls. The EDSDK client application receives this event and begins processing for downloading images from the camera.

(4) Direct Transfer Release

This state indicates that direct transfer is not currently being carried out.

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

2.8 Asynchronous Events

An asynchronous event is a mechanism used to issue notifications from the EDSDK to the application regarding cameras connected to the host PC or state changes that have occurred for a camera. For example, if a state change occurs where a camera's shooting mode changes and a new image that needs to be transferred to the PC has been shot, a notification of that fact is sent to the application regardless of its state (asynchronously).

An event handler capable of the specific processing required for a particular event must be registered in order to receive such an event (notification). An event handler is a user function called when an event is received. Event handlers are also referred to as "callback functions." Users can allow events to be accepted by creating and registering callback functions that accept events issued by EDSDK.

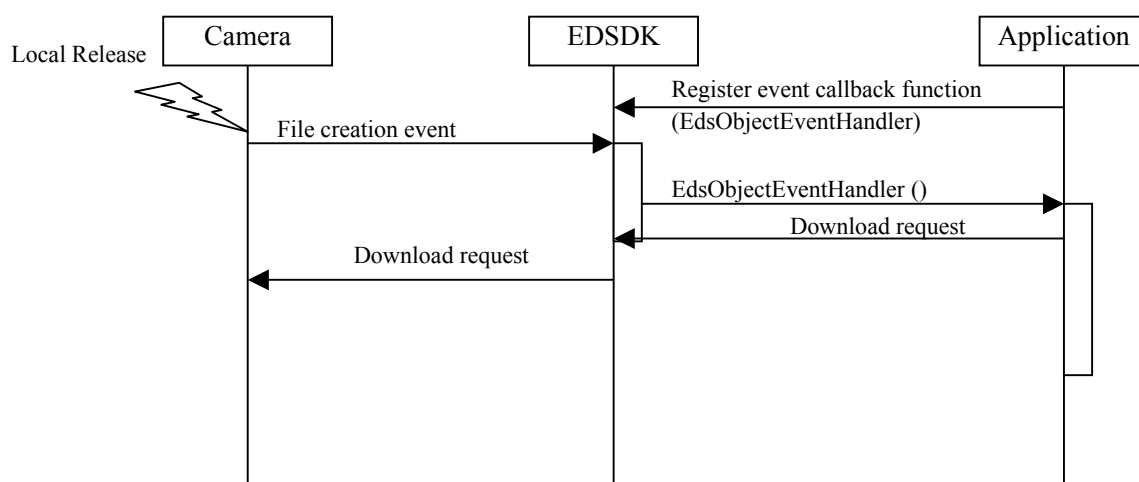

Figure 2-7 Example of a Camera Operation-Based Event Notification

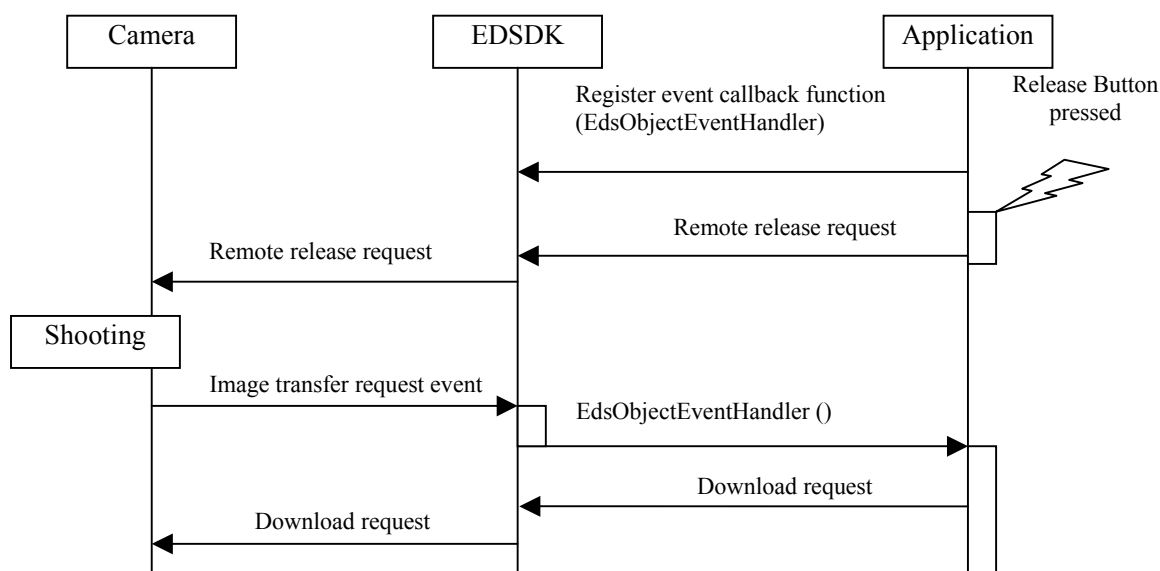

Figure 2-8 Host PC Operation-Related Event Notification

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

When an event occurs, the EDS SDK executes the callback function registered by the user. The callback function is executed on a newly generated thread and takes information depending on the event type as arguments (as specified by the event ID).

The user must release objects as they become unneeded.

There are three types of events issued from the EDS SDK to a client application: object-related events, property-related events, and state-related events.

(1) Object-related events

This is the group of events where request notifications are issued to create, delete or transfer image data stored in a remotely connected camera (in memory) or image files on the memory card.

(2) Property-related events

This is the group of events where notifications are issued regarding changes in the properties of a remotely connected camera.

(3) State-related events

This is the group of events where notifications are issued regarding changes in the state of a remotely connected camera, such as the activation of a shut-down timer.

For details on event information and the role events play, see the section [Asynchronous Events](#).

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

2.9 Initializing and Terminating the Library

The user must initialize the EDSDK library in order to use EDSDK functions other than those for getting device information from a camera. The user must also terminate the library when EDSDK functions are no longer needed.

Be sure to execute initialization and termination of the library once each within the application process.

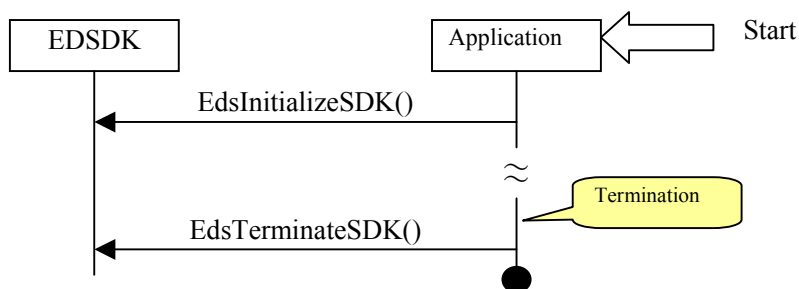

Figure 2-9 Initialization and Termination

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

2.10 Accessing a Camera

The EDSDK provides methods of accessing and controlling a camera. In order to allow more than one camera connected to the host PC by USB or other means, it is possible to get all camera objects by repeatedly calling **EdsGetChildAtIndex** by specifying an index of child objects on the camera list.

The number of cameras connected can be obtained using **EdsGetChildCount**. Specify 0 as the index passed to **EdsGetChildAtIndex** if there is only one camera.

EDSDK client application can open a session with any one of the connected cameras. Opening a session means connecting to a camera at the application level so that it is possible to control that camera from the application and get associated properties and events. To open a session, specify the camera in question and call **EdsOpenSession**. Open sessions must be closed using **EdsCloseSession** when communications are finished.

Note that EDSDK does not support opening sessions with more than one camera at once.

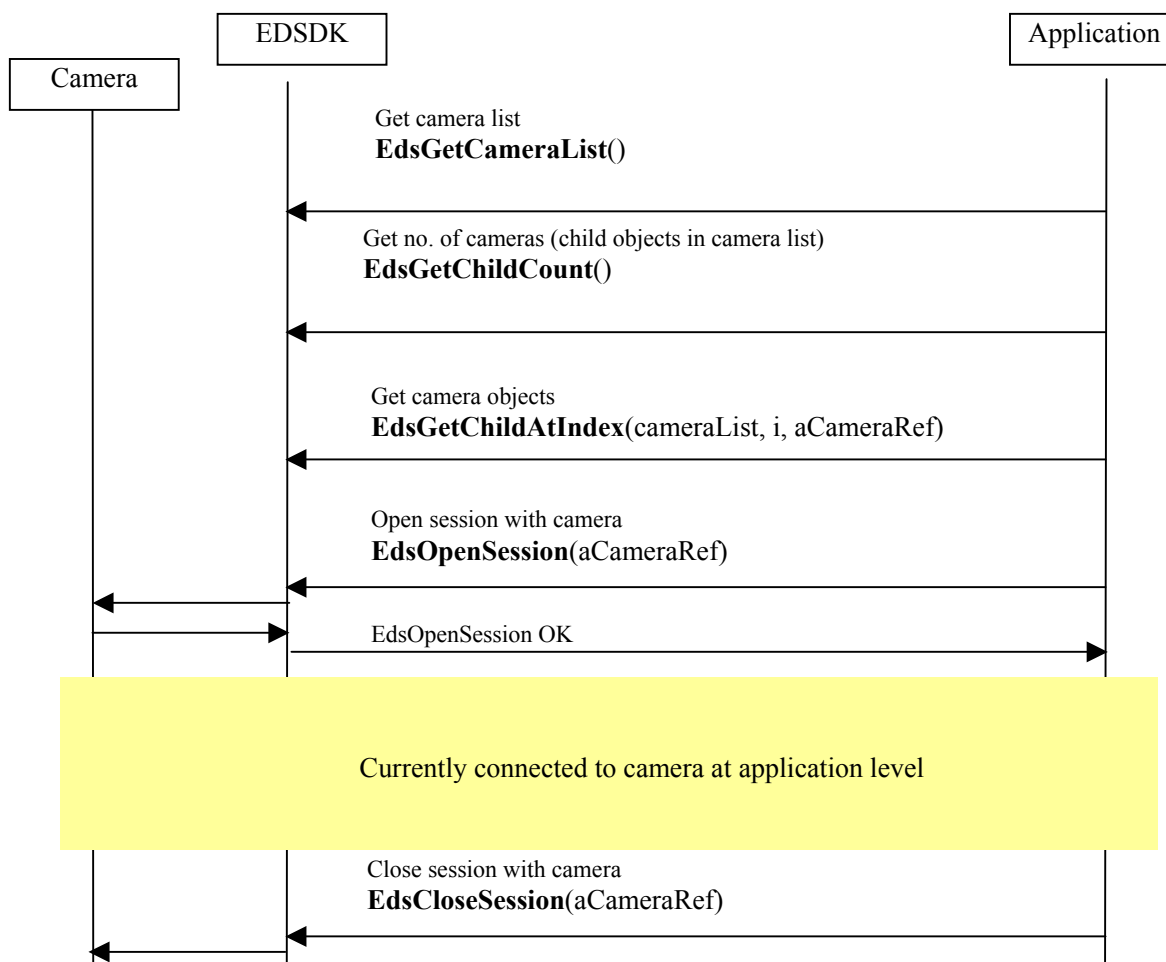

Figure 2-10 Camera Access

| | | | | |
| | | | | |
| | | | | |

Notes on Developing Windows Applications

When creating applications that run under Windows, a COM initialization is required for each thread in order to access a camera from a thread other than the main thread.

To create a user thread and access the camera from that thread, be sure to execute **CoInitializeEx(NULL, COINIT_APARTMENTTHREADED)** at the start of the thread and **CoUninitialize()** at the end.

Sample code is shown below. This is the same when controlling EdsVolumeRef or EdsDirectoryItemRef objects from another thread, not just with EdsCameraRef .

```
void TakePicture(EdsCameraRef camera)
{
    // Executed by another thread
    HANDLE hThread = (HANDLE)_beginthread(threadProc, 0, camera);
    // Block until finished
    ::WaitForSingleObject( hThread, INFINITE );
}

void threadProc(void* lParam)
{
    EdsCameraRef camera = (EdsCameraRef)lParam;

    CoInitializeEx( NULL, COINIT_APARTMENTTHREADED );

    EdsSendCommand(camera, kEdsCameraCommand_TakePicture, 0);

    CoUninitialize();

    _endthread();
}
```

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

2.11 Transferring Files in the Camera

This section describes how to access files in the camera and transfer them to the host PC.

Although it is possible to access the camera and control the properties of files (such as the date of creation and protection settings), it is not possible to analyze file properties. Files must therefore be transferred in order to get file properties. A method for transferring thumbnails (header information) only is also provided for such cases.

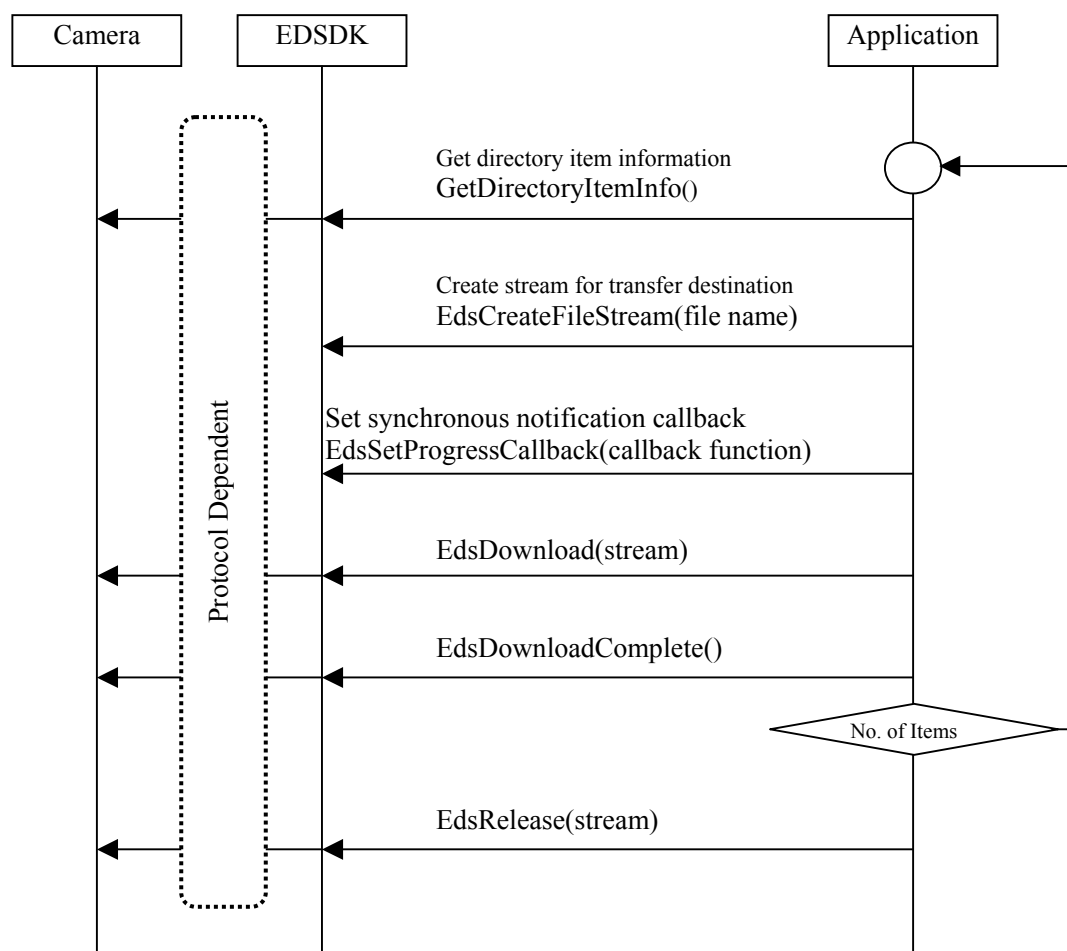

Figure 2-11 Transfer of Files in Camera

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

2.12 Transferring Captured Images

When a shoot command is sent from the host PC to the camera, the camera will record the image shot in a buffer inside the camera. Once the shot has been taken, the callback function set using **EdsSetPropertyEventHandler**, **EdsSetObjectEventHandler**, and **EdsSetCameraStateEventHandler** will be called by the EDSK. The user must sequentially transfer the images stored in the camera buffer to the host PC.

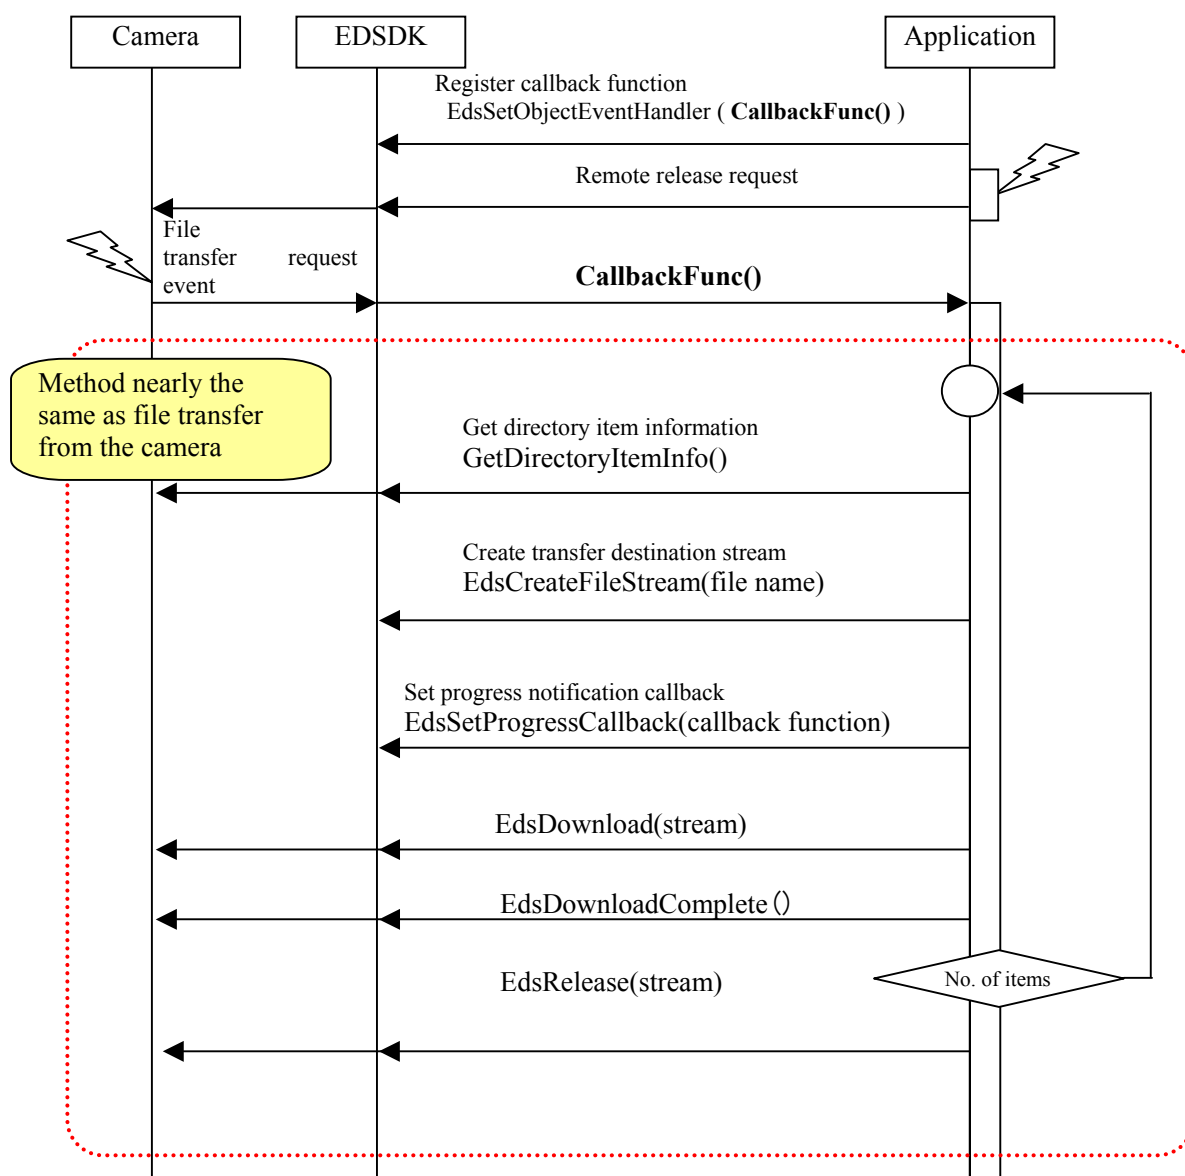

Figure 2-12 Capture Image Transfer

|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

2.13 Handling Image Objects

2.13.1 Overview

As touched on in the section on EDSDK objects, it is impossible to get an image object reference from an image file stored in a camera. An image object reference can only be obtained after first downloading the image file to a host PC.

An image object is an object that has properties. Camera properties such as Tv and Av that are used while shooting images are stored and can be obtained using **EdsGetPropertyData**. In addition, it is possible to process an image under conditions other than those at the time the image was shot by setting processing-related properties such as the white balance and picture style using **EdsSetPropertyData** if the image object is RAW.

2.13.2 Getting and Setting Properties

The following figure shows the sequence for getting properties from a camera image.

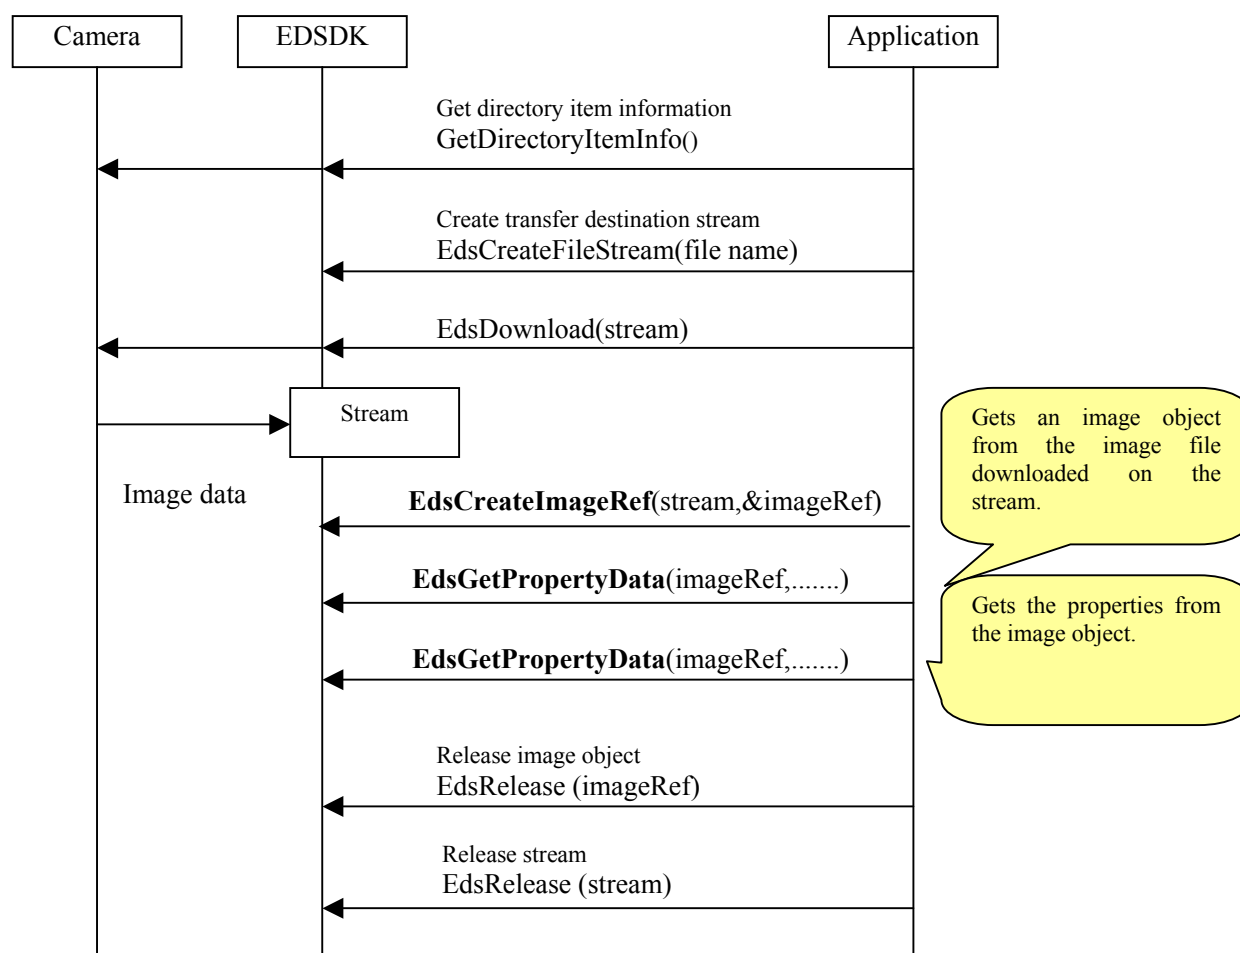

Figure 2-13 Getting an Image Object and Its Properties

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

When processing is carried out using **EdsGetImage** or **EdsSaveImage** by setting properties for the image object, the specified property settings will be reflected in the generated JPEG. Note, however, that changes to properties will not be reflected in the source image stored by **EdsImageRef**.

| | | | | |
| | | | | |
| | | | | |

2.14 Basic Data Type Definitions

This section introduces the basic data types used under the EDS SDK. These data types are defined as C language types.

```
typedef void          EdsVoid;
typedef int           EdsBool;

typedef char          EdsChar;
typedef char          EdsInt8;
typedef unsigned char EdsUInt8;
typedef short         EdsInt16;
typedef unsigned short EdsUInt16;
typedef long          EdsInt32;
typedef unsigned long EdsUInt32;

#ifdef __MACOS__
#ifdef __cplusplus
    typedef long long    EdsInt64;
    typedef unsigned long long EdsUInt64;
#else
    typedef SInt64       EdsInt64;
    typedef UInt64       EdsUInt64;
#endif
#else
    typedef __int64      EdsInt64;
    typedef unsigned __int64 EdsUInt64;
#endif

typedef float         EdsFloat;
typedef double        EdsDouble;
```

2.15 EDS SDK Errors

Most of the APIs supplied by EDS SDK return an error code of type `EdsError` as their return value.

The return value of an API that terminates normally is `EDS_ERR_OK`. If an error occurs, the return value of the API in question is set to the error code indicating the root cause of the error and any passed parameters are stored as undefined values. (Note that an API used to control files is not limited to returning an error related to file control.)

For error codes, see the list given in the header file `EdsError.h` or see [EDS ERROR Lists](#) at the end of the section describing APIs in this document.

3. API Reference

3.1 API Details

API specifications are explained in the following format.

Description

Indicates the main API function.

Syntax

EdsError EdsXXXXX(EdsUInt32 **in**XXXX, EdsBaseRef ***out**XXX);

Indicates the syntax for calling the API.

Parameters

Explains each argument in the syntax individually.

In the syntax, argument names in the format **in**XXX represent arguments for which you enter values. Argument names in the format **out**XXX represent arguments with values set by the libraries (that is, passed by reference). Before calling APIs, you must prepare variables for storing the data to be retrieved.

Return Values

Explains API return values.

See Also

Indicates information related to the API.

Note

Considerations when using the API.

Example

Sample code.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

3.1.1 EdsInitializeSDK

Description

Initializes the libraries.

When using the EDSDK libraries, you must call this API once before using EDSDK APIs.

Syntax

EdsError **EdsInitializeSDK()**

Parameters

None

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
- EdsTerminateSDK

Example

- See [Sample 1](#).

3.1.2 EdsTerminateSDK

Description

Terminates use of the libraries.

Calling this function releases all resources allocated by the libraries.

Syntax

EdsError **EdsTerminateSDK()**

Parameters

None

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
- EdsInitializeSDK

Example

- See [Sample 1](#).

3.1.3 EdsRetain

Description

Increments the reference counter of existing objects.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Syntax

EdsUInt32 EdsRetain(EdsBaseRef inRef)

Parameters

inRef

Objects of all types in the EDSDK can be designated.

| Type | Description |
|---------------------|---|
| EdsCameraListRef | A list of remote cameras |
| EdsCameraRef | A particular remote camera |
| EdsVolumeRef | A volume on the camera's recording media |
| EdsDirectoryItemRef | A directory or file in the volume |
| EdsImageRef | An image file on the host computer |
| EdsStreamRef | Stream data on the remote camera or host computer |

Return Values

Returns a reference counter if successful. For errors, returns 0xFFFFFFFF.

The return value is 4 bytes, and the maximum value of the reference counter is 65535.

See Also

- Related APIs
EdsRelease

Example

- See [Sample 1](#).

3.1.4 EdsRelease

Description

Decrements the reference counter to an object. When the reference counter reaches 0, the object is released.

Syntax

EdsUInt32 EdsRelease (EdsBaseRef inRef)

Parameters

inRef

Objects of all types in the EDSDK can be designated.

(EdsCameraListRef, EdsCameraRef, EdsDirectoryItemRef, EdsImageRef, or EdsStreamRef)

Return Values

Returns a reference counter if successful. For errors, returns 0xFFFFFFFF.

See Also

- Related APIs
EdsRetain, EdsGetCameraList, EdsGetChildAtIndex, and EdsGetParent, EdsCreateImage

Note

- The reference counter is incremented not only for objects with a reference counter incremented explicitly by means of EdsRetain but also for EDSDK objects retrieved by means of EdsGetCameraList,

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

EdsGetChildAtIndex, or EdsGetParent (refer to the objects that can be designated with inRef), for which the reference counter is incremented by one implicitly. Thus, when objects are no longer needed, you must use this API to decrease the reference counter.

Example

- See [Sample 1](#).

3.1.5 EdsGetChildCount

Description

Gets the number of child objects of the designated object.

Example: Number of files in a directory

Syntax

```
EdsError EdsGetChildCount ( EdsBaseRef inRef, EdsUInt32* outCount )
```

Parameters

inRef

EdsCameraListRef, EdsVolumeRef, EdsCameraRef, or EdsDirectoryItemRef.

outCount

Pointer to the variable for receiving the child object of the object designated by inRef.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetChildAtIndex

Example

- See [Sample 2](#).

3.1.6 EdsGetChildAtIndex

Description

Gets an indexed child object of the designated object.

| Relevant object | Child object that can be retrieved |
|-----------------|------------------------------------|
| Camera list | Camera |
| Camera | Volume |
| Volume | Directory item |
| Directory item | Directory item (folder or file) |

Syntax

```
EdsError EdsGetChildAtIndex(
    EdsBaseRef inRef,
    EdsInt32 inIndex,
    EdsBaseRef* outRef )
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Parameters

inRef

Designate the parent object of the object to get. You can designate EdsCameraListRef, EdsCameraRef, EdsVolumeRef, or EdsDirectoryItemRef.

inIndex

Designate the index of the child object list. The index is 0-based, so designate 0 to get the first child object.

outRef

The indexed child object.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetChildCount and EdsGetParent

Note

The reference counter is implicitly 1 for the retrieved child object. When the object is not needed, you must use EdsRelease to decrease the reference counter.

Example

- See [Sample 2](#).

3.1.7 EdsGetParent

Description

Gets the parent object of the designated object.

Syntax

```
EdsError EDSAPI EdsGetParent( EdsBaseRef inRef, EdsBaseRef *outParentRef );
```

Parameters

inRef

The EdsCameraListRef, EdsCameraRef, EdsVolumeRef, or EdsDirectoryItemRef object.

outParentRef

Returns a pointer to the variable for receiving the parent object reference.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- For details on object parent-child relationships, see [EDSDK Objects](#).
- Related APIs
EdsGetChildAtIndex and EdsRelease

Note

The reference counter is implicitly 1 for the retrieved parent object. When the object is not needed, you must use EdsRelease to decrease the reference counter.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

3.1.8 EdsGetCameraList

Description

Gets camera list objects.

Syntax

EdsError **EdsGetCameraList(EdsCameraListRef *outCameraListRef)**

Parameters

outCameraListRef

When the return value is EDS_ERR_OK, a list of cameras connected to the host computer is specified in outCameraListRef.

When the return value is other than EDS_ERR_OK, the content of outCameraListRef is unspecified.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsRelease, EdsGetChildCount, and EdsGetChildAtIndex

Note

- The reference counter is implicitly 1 for the retrieved camera list. When the object is not needed, you must use EdsRelease to decrease the reference counter.

Example

- See [Sample 2](#).

3.1.9 EdsGetDeviceInfo

Description

Gets device information, such as the device name.

Because device information of remote cameras is stored on the host computer, you can use this API before the camera object initiates communication (that is, before a session is opened).

Syntax

EdsError **EdsGetDeviceInfo(EdsCameraRef inCameraRef, EdsDeviceInfo *outDeviceInfo)**

Parameters

inCameraRef

The camera object for which to get device information.

outDeviceInfo

Pointer to the EdsDeviceInfo structure for receiving device information.

EdsDeviceInfo

| EdsDeviceInfo | Type | Description |
|---------------|------|-------------|
|---------------|------|-------------|

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| constituent elements | | |
|----------------------|-----------|---|
| szPortName | EdsChar[] | Port name |
| szDeviceDescription | EdsChar[] | Device name Example: "EOS 30D PTP" |
| deviceSubType | EdsUInt32 | Canon legacy protocol cameras: 0 Canon PTP cameras: 1 Canon PTP-IP cameras: 2 |

If the camera involved in PTP communication is connected to a Windows computer on which WIA is installed, 0 is specified in DeviceSubType, representing standard Windows PTP.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

3.1.10 EdsGetVolumeInfo

Description

Gets volume information for a memory card in the camera.

Syntax

```
EdsError EdsGetVolumeInfo(
    EdsVolumeRef inVolumeRef,
    EdsVolumeInfo *outVolumeInfo )
```

Parameters

inVolumeRef

Designate the volume object for which to get volume information.

outVolumeInfo

Specifies the pointer to the EdsVolumeInfo structure for receiving the volume information.

EdsVolumeInfo

| EdsVolumeInfo constituent elements | Type | Description |
|------------------------------------|-----------|--|
| storageType | EdsUInt32 | Value defined by Enum EdsStorageType |
| access | EdsAccess | Value defined by Enum EdsAccess |
| maxCapacity | EdsUInt64 | Maximum size (in bytes) |
| freeSpaceInBytes | EdsUInt64 | Available capacity (in bytes) |
| szVolumeLabel | EdsChar[] | Volume name (an ASCII string) Example: "A:" or another drive name |

Enum EdsStorageType <defined location>EDSDKTypes.h

| Value | Description |
|-------|-------------------------|
| 0 | No memory card inserted |
| 1 | Compact flash |
| 2 | SD card |

Enum EdsAccess <defined location>EDSDKTypes.h

| Value | Description |
|-------|-------------|
| 0 | Read Only |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|------------|--|
| 1 | Write Only |
| 2 | Read and Write |
| 0xFFFFFFFF | Access error Note: This means that the designated memory card is in a state preventing use, such as when the card is not formatted. |

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetChildAtIndex

Note

- In the context of the EDSDK, volumes are objects representing memory cards.
- The constituent element access of EdsVolumeInfo is the access type when the file object is open.

3.1.11 EdsGetDirectoryItemInfo

Description

Gets information about the directory or file objects on the memory card (volume) in a remote camera.

Syntax

```
EdsError  EdsGetDirectoryItemInfo(
    EdsDirectoryItemRef  inDirItemRef,
    EdsDirectoryItemInfo*  outDirItemInfo  )
```

Parameters

inDirItemRef

Designate the directory item object.

outDirItemInfo

Pointer to the DirectoryItemInfo structure for receiving the directory item information.

DirectoryItemInfo includes the following information.

| Constituent elements | Description |
|----------------------|--|
| size | The file size. For folders, the file size is indicated as 0. |
| isFolder | If a folder: True If not a folder: False |
| groupID | A non-zero integer. The same group ID is assigned to files that belong to the same group, such as RAW+JPEG images or RAW+AVI images. Note: Valid for type 2 protocol standard cameras. |
| option | An option when a direct transfer request is received (a kEdsObjectEvent_DirItemRequestTransferDT event). kEdsTransferOptionToDesktop is set when [Wallpaper] in the direct transfer is executed by means of camera operations. Prohibit it under other timing conditions. Note: Valid for type 2 protocol standard cameras. |
| szFileName | Returns the directory name or file name if successful. Example: " MG_0060.JPG" |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

EdsTargetImageType <defined location>EDSDKTypes.h

| Value | Description |
|-----------------------------|-------------------------------|
| kEdsTargetImageType_unknown | Folder, or unknown image type |
| kEdsTargetImageType_Jpeg | JPEG |
| kEdsTargetImageType_TIFF | 8-bit TIFF |
| kEdsTargetImageType_TIFF16 | 16-bit TIFF |
| kEdsTargetImageType_RGB | 8-bit RGB, chunky format |
| kEdsTargetImageType_RGB16 | 16-bit RGB, chunky format |

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

Note

- For type 1 protocol standard cameras, you can determine if objects are in the same group by whether their file names (excluding the extension) of the szFileName member in the DirectoryInfoInfo structure are the same or not.

See Also

- For information on data types of the EDS SDK, see "Data Types Used by the APIs" in the Appendix.

Example

- See [Sample 6](#).

3.1.12 EdsOpenSession

Description

Establishes a logical connection with a remote camera.
Use this API after getting the camera's EdsCamera object.

Syntax

```
EdsError EDSAPI EdsOpenSession( EdsCameraRef inCameraRef );
```

Parameters

inCameraRef

Designate the camera object of the camera to connect to.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

Note

Use the EdsCloseSession API to disconnect from the camera.

See Also

- Related APIs
EdsCloseSession

Example

- See [Sample 1](#).

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

3.1.13 EdsCloseSession

Description

Closes a logical connection with a remote camera.

Syntax

```
EdsError EDSAPI EdsCloseSession( EdsCameraRef inCameraRef );
```

Parameters

inCameraRef

Designate the camera object of the camera to disconnect from.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsOpenSession

Example

- See [Sample 1](#).

3.1.14 EdsSendCommand

Description

Sends a command such as "Shoot" to a remote camera.

Syntax

```
EdsError EdsSendCommand( EdsCameraRef inCameraRef,  
                          EdsUInt32 inCommand, EdsUInt32 inParam )
```

Parameters

inCameraRef

Only a camera object can be designated.

inCommand

The command ID to send to the object.

In EDS SDKTypes.h, you can designate commands defined by enum EdsCameraCommand.

| inCommand | inParam | Description |
|---------------------------------------|---------|---|
| kEdsCameraCommand_TakePicture | N/A | Requests the camera to shoot. |
| kEdsCameraCommand_ExtendShutDownTimer | N/A | Requests to extend the time for the auto shut-off timer. (Keep Device On) |
| kEdsCameraCommand_BulbStart | N/A | Starts bulb shooting/ Ends bulb shooting |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | |
|---------------------------------|--|---|
| kEdsCameraCommand_BulbEnd | N/A | This command is supported by EOS 1D Mark III and later cameras. Lock the UI before bulb shooting. An exposure time event is generated at the start of bulb shooting. (kEdsStateEvent_BulbExposureTime) |
| kEdsCameraCommand_DriveLensEvf | enum EdsEvfDriveLens | Drives the lens and adjusts focus This command is supported by EOS 1D Mark III and later cameras, and only in live view mode. |
| kEdsCameraCommand_ClickWBEvf | Upper WORD: x-coordinate Lower WORD: y-coordinate | Adjusts the white balance of the live view image at the specified position This command is supported by EOS 1D Mark III and later cameras, and only in live view mode. |
| kEdsCameraCommand_DoAfEvf | enum EdsEvfAfMode | Controls auto focus in live view mode. This command is supported by the EOS 50D or EOS 5D Mark II or later cameras, and only in live view mode. |
| kEdsCameraCommand_ShutterButton | enum EdsPressShutterButtonMode | Controls shutter button operations. This command is supported by the EOS 50D or EOS 5D Mark II or later cameras. |

inParam

Specify the x-coordinate in the upper WORD and the y-coordinate in the lower WORD for kEdsCameraCommand_ClickWBEvf only.

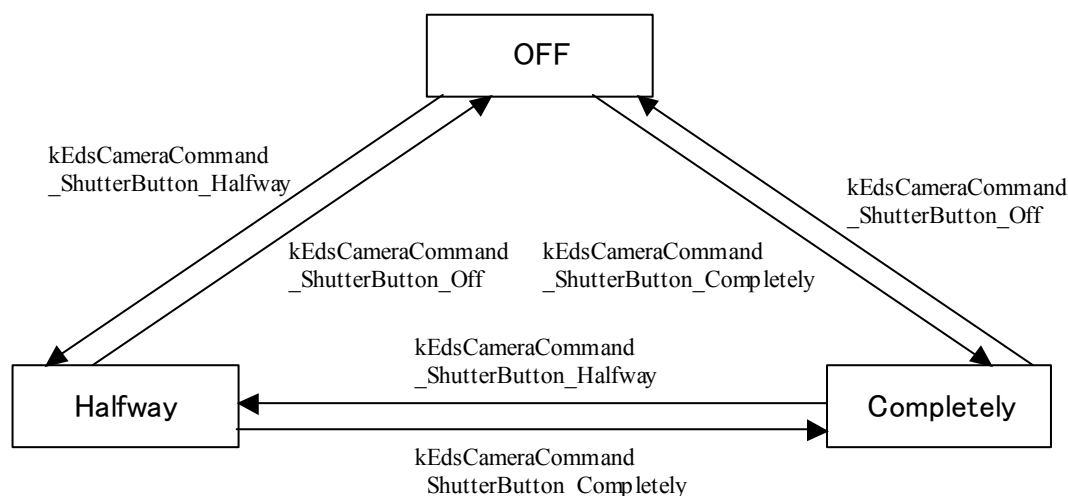

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

Note

This is a description of EdsPressShutterButtonMode when kEdsCameraCommand_ShutterButton is specified in InParam.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

In the above diagram, “OFF” represents the state in which the camera’s shutter button is not being pressed, “Halfway” represents the state in which it is being pressed halfway, and “Completely” represents the state in which it is being pressed completely.

Since both the “Halfway” and “Completely” states are maintained continuously, they must be explicitly terminated by issuing the kEdsCameraCommand_ShutterButton_Off command.

Usually, AF operations are determined depending on camera and lens settings. Parameters for performing photometry that do not result in AF operations can also be used. Parameters depending on camera and lens settings cannot be used together with parameters that do not result in AF operations. Be sure to use in combination with the following in accordance with the settings you want to use.

| | Depends on Camera/Lens Settings | No AF Operations |
|------------|--|--|
| Halfway | kEdsCameraCommand_ShutterButton_Halfway | kEdsCameraCommand_ShutterButton_Halfway_NonAF |
| Completely | kEdsCameraCommand_ShutterButton_Completely | kEdsCameraCommand_ShutterButton_Completely_NonAF |
| OFF | kEdsCameraCommand_ShutterButton_Off | |

Example

- See [Sample 9](#).

3.1.15 EdsSendStatusCommand

Description

Sets the remote camera state or mode.

Syntax

```

EdsError EDSAPI EdsSendStatusCommand ( EdsCameraRef    inCameraRef,
                                         EdsCameraStatusCommand inStatusCommand,
                                         EdsInt32         inParam);
    
```

Parameters

inCameraRef

Designate the camera object.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

inStatusCommand

Designate the particular mode ID to set the camera to.

In EDSTypes.h, you can designate commands defined by enum EdsCameraStatusCommand.

| inStatusCommand | inParam | Description |
|---|---------|---|
| kEdsCameraStatusCommand_UILock | N/A | Locks the UI |
| kEdsCameraStatusCommand_UIUnlock | N/A | Unlocks the UI |
| kEdsCameraStatusCommand_EnterDirectTransfer | N/A | Puts the camera in direct transfer mode |
| kEdsCameraStatusCommand_ExitDirectTransfer | N/A | Ends direct transfer mode |

inParam

Currently unused. Designate 0.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

Note

- These are pairs of commands to lock and unlock the UI, as well as to put the camera in direct transfer mode and exit this mode. If you switch modes by means of EdsSendStatusCommand, use EdsSendStatusCommand again to restore the original mode.
- The UI must be locked on type 1 protocol standard cameras before sending a command to get or set the property. However, on type 2 protocol standard cameras, the UI is locked automatically by the camera, so locking the UI from the application is not necessary.

```
EdsSendStatusCommand ( kEdsSendStatusCommand_UILock )
```

```
EdsGetPropertyData( ..., kEdsPropID_Av, ... );  
EdsGetPropertyData( ..., kEdsPropID_Tv, ... );  
EdsGetPropertyData( ..., kEdsPropID_ISOSpeed, ... );
```

```
EdsSendStatusCommand (kEdsSendStatusCommand_UIUnlock)
```

Optional for the EOS 30D.

3.1.16 EdsSetCapacity

Description

Sets the remaining HDD capacity on the host computer(excluding the portion from image transfer),as calculated by subtracting the portion from the previous time.

Set a reset flag initially and designate the cluster length and number of free clusters.

Some type 2 protocol standard cameras can display the number of shots left on the camera based on the available disk capacity of the host computer.

For these cameras, after the storage destination is set to the computer,use this API to notify the camera of the available disk capacity of the host computer.

Syntax

```
EdsError EDSAPI EdsSetCapacity ( EdsCameraRef    inCameraRef,  
                                EdsCapacity      inCapacity);
```

Parameters

InCameraRef

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

The reference of the camera which will receive the command.

Incapacity

The remaining capacity of a transmission place.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

Note

3.1.17 EdsGetPropertySize

Description

Gets the byte size and data type of a designated property from a camera object or image object.

Syntax

```
EdsError  EdsGetPropertySize( EdsBaseRef  inRef,
                             EdsPropertyID inPropertyID, EdsInt32  inParam,
                             EdsDataType  *outEdsDataType, EdsUInt32  *outSize )
```

Parameters

inRef

Designate either EdsCameraRef or EdsImageRef.

inPropertyID

Designate the property ID.

inParam

Additional information of the property. Used to designate multiple additional items of information, if the property has such information that can be set or retrieved. For descriptions of values that can be designated for each property, see the description of inParam for EdsGetPropertyData.

outEdsDataType

Returns the property data type. The particular item defined by enum EdsDataType is returned.

outSize

Stores the property size. The data type and value returned varies depending on the property ID. See "Property Details" for further information.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetPropertyData and EdsGetPropertyDesc
- For further information on properties, see Properties.

Example

See [Sample 3](#).

3.1.18 EdsGetPropertyData

Description

Gets property information from the object designated in inRef.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Syntax

```

EdsError EDSAPI EdsGetPropertyData(
    EdsBaseRef inRef,
    EdsPropertyID inPropertyID,
    EdsInt32 inParam,
    EdsUInt32 inPropertySize,
    EdsVoid *outPropertyData )

```

Parameters

inRef

Designate the object for which to get properties. The EDS SDK objects you can designate are EdsCameraRef, EdsDirectoryItemRef, or EdsImageRef.

inPropertyID

Designate the property ID.

inParam

Designate additional property information. Use additional property information if multiple items of information such as picture styles can be set or retrieved for a property. Values that can be designated for each property are as follows.

■ Properties regarding camera settings

| inPropertyID | inParam setting value |
|---------------------------------|------------------------|
| kEdsPropID_ProductName | 0 |
| kEdsPropID_BodyID | 0 |
| kEdsPropID_OwnerName | 0 |
| kEdsPropID_MakerName | 0 |
| kEdsPropID_DateTime | 0 |
| kEdsPropID_FirmwareVersion | 0 |
| kEdsPropID_BatteryLevel | 0 |
| kEdsPropID_BatteryQuality | 0 |
| kEdsPropID_CFn | Custom Function number |
| kEdsPropID_SaveTo | 0 |
| kEdsPropID_CurrentStorage | 0 |
| kEdsPropID_CurrentFolder | 0 |
| kEdsPropID_HDDirectoryStructure | 0 |
| kEdsPropID_LensStatus | 0 |
| kEdsPropID_Artist | 0 |
| kEdsPropID_Copyright | 0 |

■ Properties regarding images

| InPropertyID | inParam setting value |
|-------------------------|--|
| kEdsPropID_ImageQuality | 0 |
| kEdsPropID_JpegQuality | (1) EOS 1D series models High-order Word: Processing Parameter set number; low-order Word: kEdsImageQualityNormal or kEdsImageQualityFine (2) Other models Image Size (retrieved by means of kEdsPropID_ImageQuality) |
| kEdsPropID_Orientation | 0 |
| kEdsPropID_ICCProfile | 0 |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|------------------------------|---|
| kEdsPropID_FocusInfo | 0 |
| kEdsPropID_WhiteBalance | 0 |
| kEdsPropID_ColorTemperature | 0 |
| kEdsPropID_WhiteBalanceShift | 0 |
| kEdsPropID_ClickWBPoint | 0 |
| kEdsPropID_WBCoeffs | 0 |
| kEdsPropID_Linear | 0 |
| kEdsPropID_Sharpness | To designate the current sharpness value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 To designate the ParameterSet number by designating EdsCameraRef: the ParameterSet number |
| kEdsPropID_ParameterSet | 0 |
| kEdsPropID_ColorMatrix | 0 |
| kEdsPropID_ColorSaturation | To designate the current saturation value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 To designate ColorMatrix by designating EdsCameraRef: one of the ColorMatrix numbers |
| kEdsPropID_Contrast | Current contrast value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 To designate the ParameterSet number by designating EdsCameraRef: the ParameterSet number |
| kEdsPropID_ColorTone | Current color tone value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 To designate ColorMatrix by designating EdsCameraRef: one of the ColorMatrix numbers |
| kEdsPropID_ColorSpace | Current color space value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 To designate ColorMatrix by designating EdsCameraRef: one of the ColorMatrix numbers To designate a picture style by designating EdsCameraRef: one of enum EdsPictureStyle |
| kEdsPropID_PhotoEffect | 0 |
| kEdsPropID_FilterEffect | Current filter effect value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 |
| kEdsPropID_ToningEffect | Current toning effect value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 |
| kEdsPropID_ToneCurve | Standard (read-only; cannot be set): 0 Set 1:1 Set 2:2 Set 3:3 and so on Note: If EdsImageRef is designated, only 0. |
| kEdsPropID_PictureStyle | Current picture style value (or, if EdsImageRef is designated, either the current value or the value at the time of shooting): 0 One of these: User setting 1: kEdsPictureStyle_User1 User setting 2: kEdsPictureStyle_User2 User setting 3: kEdsPictureStyle_User3 |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|--------------------------------|---|
| kEdsPropID_PictureStyleCaption | 0 |
|--------------------------------|---|

■ Properties regarding image capture

| InPropertyID | inParam setting value |
|---------------------------------|-----------------------|
| kEdsPropID_AEMode | 0 |
| kEdsPropID_DriveMode | 0 |
| kEdsPropID_ISOSpeed | 0 |
| kEdsPropID_MeteringMode | 0 |
| kEdsPropID_AFMode | 0 |
| kEdsPropID_Av | 0 |
| kEdsPropID_Tv | 0 |
| kEdsPropID_ExposureCompensation | 0 |
| kEdsPropID_DigitalExposure | 0 |
| kEdsPropID_FlashCompensation | 0 |
| kEdsPropID_FocalLength | 0 |
| kEdsPropID_AvailableShots | 0 |
| kEdsPropID_Bracket | 0 |
| kEdsPropID_WhiteBalanceBracket | 0 |
| kEdsPropID_LensName | 0 |
| kEdsPropID_AEBacket | 0 |
| kEdsPropID_FEBacket | 0 |
| kEdsPropID_ISOBracket | 0 |
| kEdsPropID_NoiseReduction | 0 |
| kEdsPropID_FlashOn | 0 |
| kEdsPropID_RedEye | 0 |
| kEdsPropID_FlashMode | 0 |
| | |
| kEdsPropID_GPSVersionID | 0 |
| kEdsPropID_GPSLatitudeRef | 0 |
| kEdsPropID_GPSLatitude | 0 |
| kEdsPropID_GPSLongitudeRef | 0 |
| kEdsPropID_GPSLongitude | 0 |
| kEdsPropID_GPSAltitudeRef | 0 |
| kEdsPropID_GPSAltitude | 0 |
| kEdsPropID_GPSTimeStamp | 0 |
| kEdsPropID_GPSSatellites | 0 |
| kEdsPropID_GPSMapDatum | 0 |
| kEdsPropID_GPSDataStamp | 0 |
| kEdsPropID_GPSStatus | 0 |

■ Properties regarding live view

| InPropertyID | inParam setting value |
|------------------------------------|-----------------------|
| kEdsPropID_Evf_OutputDevice | 0 |
| kEdsPropID_Evf_Mode | 0 |
| kEdsPropID_Evf_WhiteBalance | 0 |
| kEdsPropID_Evf_ColorTemperature | 0 |
| kEdsPropID_Evf_DepthOfFieldPreview | 0 |
| kEdsPropID_Evf_Zoom | 0 |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|--------------------------------|---|
| kEdsPropID_Evf_ZoomPosition | 0 |
| kEdsPropID_Evf_ZoomPosition | 0 |
| kEdsPropID_Evf_Histogram | 0 |
| kEdsPropID_Evf_ImagePosition | 0 |
| kEdsPropID_Evf_HistogramStatus | 0 |
| kEdsPropID_Evf_AFMMode | 0 |

inPropertySize

Designate the byte size of the property. If the property data size is not known in advance, it can be retrieved by means of EdsGetPropertySize.

outPropertyData

Specifies the property data. The data type and value returned vary depending on the property. For property information, see Properties.

Return Values

Returns EDS_ERR_OK on normal completion. Otherwise, see the [EDS Error Lists](#) for error codes.

See Also

- Related APIs
EdsGetPropertySize, EdsSetPropertyData, and EdsGetPropertyDesc
- For further information on properties, see Properties.

Note

Regarding retrieval of the camera property data in particular, the conditions that can be retrieved vary depending on the values of other property data. For further information, see Properties.

Example

- See [Sample 3](#).

3.1.19 EdsSetPropertyData

Description

Sets property data for the object designated in inRef.

Syntax

```
EdsError  EdsSetPropertyData (
    EdsBaseRef      inRef,
    EdsPropertyID   inPropertyID,
    EdsInt32        inParam,
    EdsUInt32       inPropertySize,
    const EdsVoid*   inPropertyData )
```

Parameters

inRef

Designate the object for which to set properties. Designate either EdsCameraRef or EdsImageRef.

inPropertyID

Designate the property ID.

inParam

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Designate additional property information. Use additional property information if multiple items of information such as picture styles can be set or retrieved for a property. For descriptions of values that can be designated for each property, see the description of inParam for EdsGetPropertyData.

inPropertySize

Designate the size of the property data in bytes. The data size of each property can be retrieved by means of EdsGetPropertySize.

inPropertyData

Designate the property data to set.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetPropertySize, EdsGetPropertyData, and EdsGetPropertyDesc.
- For further information on properties, see Properties.

Note

- When you set properties of an image object (EdsImageRef), this API maintains the change internally.
- When setting properties in type 1 protocol standard cameras, take steps to prevent contention with camera operations, such as by locking the UI. On the other hand, for type 2 protocol standard cameras, the UI can be locked or unlocked on the camera itself, so do not lock the UI.

Example

- See [Sample 5](#).

3.1.20 EdsGetPropertyDesc

Description

Gets a list of property data that can be set for the object designated in inRef, as well as maximum and minimum values.

This API is intended for only some shooting-related properties.

| Retrievable properties for settable data lists | Description |
|--|-----------------------|
| kEdsPropID_AEMode | Shooting mode |
| kEdsPropID_ISOSpeed | ISO speed |
| kEdsPropID_MeteringMode | Metering mode |
| kEdsPropID_Av | Aperture value |
| kEdsPropID_Tv | Shutter speed |
| kEdsPropID_ExposureCompensation | Exposure compensation |

Syntax

```
EdsError EdsGetPropertyDesc(
    EdsBaseRef      inRef,
    EdsPropertyID   inPropertyID,
    EdsPropertyDesc* outPropertyDesc )
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Parameters

inRef

The target object. Designate EdsCameraRef.

inPropertyID

Designate a property ID.

outPropertyDesc

Specifies a pointer to the EdsPropertyDesc structure for getting a list of property data that can currently be set in the target object.

If the API return value is EDS_ERR_OK, a settable property data list of properties that can be set is specified, as retrieved from the target object.

The structure of the list of property data that can be set (**EdsPropertyDesc**) has the following constituent elements.

| EdsPropertyDesc constituent elements | Type | Description |
|--------------------------------------|------------|--|
| form | EdsInt32 | Reserved (currently, always 0) |
| access | EdsAccess | Reserved (currently, always 0) |
| numElements | EdsInt32 | Indicates the number of property data list elements stored in the PropDesc array. |
| propDesc | EdsInt32[] | A property data array. The meaning of PropDesc array elements varies depending on the property type. |

Return Values

EDS_ERR_INVALID_PARAMETER is returned if a property ID is designated in inPropertyID that cannot be used with GetPropertyDesc.

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetPropertySize, EdsGetPropertyData, EdsSetPropertyData, and EdsGetPropertyDesc
- For details on properties and the meaning of array elements that can be set in the data list, see the [Properties](#) section.
- For information on data types of the EDSDK, see "Data Types Used by the APIs" in the Appendix.

Example

- See [Sample 4](#).

3.1.21 EdsDeleteDirectoryItem

Description

Deletes a camera folder or file.

If folders with subdirectories are designated, all files are deleted except protected files.

EdsDirectoryItem objects deleted by means of this API are implicitly released by the EDSDK. Thus, there is no need to release them by means of EdsRelease.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Syntax

EdsError EDSAPI EdsDeleteDirectoryItem(EdsDirectoryItemRef inDirItemRef)

Parameters

inDirItemRef

Designate the folder or file to delete.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsSendCommand

Note

- Be careful when deleting files on the remote camera to avoid doing so when the camera is not in the right mode. Lock the UI, for example.

3.1.22 EdsFormatVolume

Description

Formats volumes of memory cards in a camera.

Syntax

EdsError EDSAPI EdsFormatVolume (EdsVolumeRef inVolumeRef)

Parameters

inVolumeRef

Designate the volume (memory card) to format.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetVolumeInfo

Note

- Be careful to avoid doing this when the camera is not in the right mode. Lock the UI, for example.

3.1.23 EdsGetAttribute

Description

Gets attributes of files on a camera.

Syntax

**EdsError EDSAPI EdsGetAttribute (EdsDirectoryItemRef inDirItemRef,
EdsFileAttributes *outFileAttribute) ;**

Parameters

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

inDirItemRef

Designate the file object for which to get attributes.

outFileAttribute

Indicates the file attributes.

As for the file attributes, OR values of the value defined by enum EdsFileAttributes can be retrieved. Thus, when determining the file attributes, you must check if an attribute flag is set for target attributes.

Example: Determining the attribute value fileAttr, retrieved from a file object

```
if (kEdsFileAttribute_ReadOnly & fileAttr ){
    // The file is read-only
}
```

Enum EdsFileAttribtes <defined location>EDSDKTypes.h

| Value | Description |
|----------------------------|-------------------|
| kEdsFileAttribute_Normal | A standard file |
| kEdsFileAttribute_ReadOnly | Read-only |
| kEdsFileAttribute_Hidden | Hidden attribute |
| kEdsFileAttribute_System | System attribute |
| kEdsFileAttribute_Archive | Archive attribute |

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsSetAttribute

3.1.24 EdsSetAttribute

Description

Changes attributes of files on a camera.

Syntax

```
EdsError EDSAPI EdsSetAttribute ( EdsDirectoryItemRef inDirItemRef,
                                   EdsFileAttributes inFileAttribute );
```

Parameters

inDirItemRef

Designate the file object for which to change attributes.

outFileAttribute

Indicates the file attributes.

As for the file attributes, OR values of the value defined by enum EdsFileAttributes can be retrieved.

Enum EdsFileAttribtes <defined location>EDSDKTypes.h

| Value | Description |
|----------------------------|------------------|
| kEdsFileAttribute_Normal | A standard file |
| kEdsFileAttribute_ReadOnly | Read-only |
| kEdsFileAttribute_Hidden | Hidden attribute |
| kEdsFileAttribute_System | System attribute |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

kEdsFileAttribute_Archive

Archive attribute

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdGetAttribute

3.1.25 EdsDownload

Description

Downloads a file on a remote camera (in the camera memory or on a memory card) to the host computer. The downloaded file is sent directly to a file stream created in advance.

When dividing the file being retrieved, call this API repeatedly. Also in this case, make the data block size a multiple of 512 (bytes), excluding the final block.

Syntax

```
EdsError EDSAPI EdsDownload(
    EdsDirectoryItemRef inDirItemRef,
    EdsUInt32 inReadSize,
    EdsStreamRef outStreamRef )
```

Parameters

inDirItemRef

Designate the file object in the camera to download.

inReadSize

Designate the size in bytes to download.

outStreamRef

Specifies the destination stream. The stream for downloading is created by means of EdsCreateFileStream, EdsCreateMemoryStream, or the like.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsDownloadComplete, EdsDownloadCancel, EdsDownloadThumbnail, EdsCreateFileStream, EdsCreateMemoryStream, and EdsSetProgressCallback

Note

- EdsDownload is an API that may be checked with a progress callback. Using EdsSetProgressCallback to register the callback function enables the progress to be retrieved as an event during file transfer.
- Immediately after this API is called, the EdsDownloadComplete API must be called to notify the camera that the file transfer is complete. Similarly, if the download is canceled, EdsDownloadCancel must be called.
- If this API abends, a communication error between the camera and host computer occurs. If so, release the resources allocated by the application and restore the initial mode.

Example

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

- See [Sample 6](#).

3.1.26 EdsDownloadComplete

Description

Must be called when downloading of directory items is complete. Executing this API makes the camera recognize that file transmission is complete.
This operation need not be executed when using EdsDownloadThumbnail.

Syntax

EdsError EDSAPI EdsDownloadComplete(EdsDirectoryItemRef inDirItemRef)

Parameters

inDirItemRef

Designate the file for which to complete the downloading process.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsDownload and EdsDownloadCancel

Note

- If transfer of a file that was divided is canceled, call EdsDownloadCancel instead of this API to notify the camera that downloading of the directory item has been canceled.

Example

- See [Sample 6](#).

3.1.27 EdsDownloadCancel

Description

Must be executed when downloading of a directory item is canceled. Calling this API makes the camera cancel file transmission. It also releases resources.
This operation need not be executed when using EdsDownloadThumbnail.

Syntax

EdsError EDSAPI EdsDownloadCancel (EdsDirectoryItemRef inDirItemRef)

Parameters

inDirItemRef

Designate the file for which to cancel downloading.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

EdsDownload and EdsDownloadComplete

Note

- In applications that take locally released images on the camera and load them on host computer, if the application receives a file transfer request from the camera when the file is not needed (by means of kEdsObjectEvent_DirItemRequestTransfer or kEdsObjectEvent_DirItemRequestTransferDT), this API must be called to notify the camera that transmission has been canceled.
Normally, delete callback function registration at the moment an event is not needed.

3.1.28 EdsDownloadThumbnail

Description

Extracts and downloads thumbnail information from image files in a camera.
Thumbnail information in the camera's image files is downloaded to the host computer. Downloaded thumbnails are sent directly to a file stream created in advance.

Syntax

```
EdsError  EDSAPI  EdsDownloadThumbnail(
                                EdsDirectoryItemRef  inDirItemRef,
                                EdsStreamRef  outStreamRef )
```

Parameters

inDirItemRef

Designate the image file object with thumbnails to extract.

outStreamRef

Designate the stream for saving extracted thumbnails.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsDownload, EdsCreateFileStream, EdsCreateFileStreamEx, EdsCreateImageRef, and EdsGetImageInfo

3.1.29 EdsCreateEvfImageRef

Description

Creates an object used to get the live view image data set.

Syntax

```
EdsError  EdsCreateEvfImageRef (EdsStream inStream,
                                EdsEvfImageRef* outEvfImage)
```

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateFileStream, EdsCreateFileStreamEx

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Example

- See [Sample 10](#)

3.1.30 EdsDownloadEvfImage

Description

Downloads the live view image data set for a camera currently in live view mode.

Live view can be started by using the property ID:kEdsPropertyID_Evf_OutputDevice and data:EdsOutputDevice_PC to call EdsSetPropertyData.

In addition to image data, information such as zoom, focus position, and histogram data is included in the image data set. Image data is saved in a stream maintained by EdsEvfImageRef. EdsGetPropertyData can be used to get information such as the zoom, focus position, etc.

Although the information of the zoom and focus position can be obtained from EdsEvfImageRef, settings are applied to EdsCameraRef.

Syntax

```
EdsError  EdsDownloadEvfImage (EdsCameraRef  outStream
                               EdsEvfImageRef  outEvfImage)
```

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateEvfImageRef

Note

EDS_ERR_OBJECT_NOTREADY returns as an error when the image data set is not ready at the camera or when the image data set cannot be obtained.

Be sure to retry if EDS_ERR_OBJECT_NOTREADY is returned.

Example

- See [Sample 10](#)

3.1.31 EdsCreateFileStream

Description

Creates a new file on a host computer (or opens an existing file) and creates a file stream for access to the file. If a new file is designated before executing this API, the file is actually created following the timing of writing by means of EdsWrite or the like with respect to an open stream.

Syntax

```
EdsError  EdsCreateFileStream (const EdsChar* inFileName,
                               EdsFileCreateDisposition inCreateDisposition,
                               EdsAccess inDesiredAccess, EdsStreamRef* outStream)
```

Parameters

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

inFileName

Designate the file name of a new file or a file to open.
You can designate a null-terminated string up to EDS_MAX_NAME characters long as the file name.

inCreateDisposition

Designate how the file is handled (that is, its disposition) if it exists or does not exist.
Designate a value defined in Enum EdsFileCreateDisposition.

Enum EdsFileCreateDisposition <defined location>EDSDKTypes.h

| Value | Description |
|---|--|
| kEdsFileCreateDisposition_CreateNew | Creates a new file. An error occurs if the designated file already exists. |
| kEdsFileCreateDisposition_CreateAlways | Creates a new file. If the designated file already exists, that file is overwritten and existing attributes is erased. |
| kEdsFileCreateDisposition_OpenExisting | Opens a file. An error occurs if the designated file does not exist. |
| kEdsFileCreateDisposition_OpenAlways | If the file exists, it is opened. If the designated file does not exist, a new file is created. |
| kEdsFileCreateDisposition_TruncateExsisting | Opens a file and sets the file size to 0 bytes. |

inDesiredAccess

Values defined in Enum EdsAccess may be designated.

Enum EdsAccess <defined location>EDSDKTypes.h

| Value | Description |
|----------------------|----------------------------|
| kEdsAccess_Read | Open a read-only stream. |
| kEdsAccess_Write | Open a write-only stream. |
| kEdsAccess_ReadWrite | Allow reading and writing. |

outStreamRef

Returns a file stream to the open file.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateFileStreamEx, EdsWrite, EdsRead, and EdsRelease

Note

- The maximum file name length is limited to EDS_MAX_NAME. To go beyond this limitation or enable support of Unicode file names, use the Unicode version, EdsCreateFileStreamEx.
- The stream you create must be released after use by means of EdsRelease.

Example

- See [Sample 6](#).

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

3.1.32 EdsCreateFileStreamEx

Description

An extended version of EdsCreateFileStream.
Use this function when working with Unicode file names.

Syntax

```

EdsError  EdsCreateFileStreamEx(
#ifdef __MACOS__
    const    CFURLRef      inURL,
#else
    const    WCHAR*        inFileName,
#endif
    EdsFileCreateDisposition inCreateDisposition,
    EdsAccess inDesiredAccess, EdsStreamRef* outStream)

```

Parameters

inURL (for Macintosh)
Designate CFURLRef.
inFileName (for Windows)
Designate the file name.
inDesiredAccess
See EdsCreateFileStream.
inCreateDisposition
See EdsCreateFileStream.
outStreamRef
Returns a file stream to the open file.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateFileStream, EdsWrite, EdsRead, and EdsRelease

Note

- This API is an extended version of EdsCreateStreamFromFile.
- The stream you create must be released after use by means of EdsRelease.

3.1.33 EdsCreateMemoryStream

Description

Creates a stream in the memory of a host computer.
In the case of writing in excess of the allocated buffer size, the memory is automatically extended.

Syntax

```

EDSError  EdsCreateMemoryStream ( EdsUInt32 inBufferSize,
                                     EdsStreamRef* outStreamRef )

```

Parameters

inBufferSize

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Designate the buffer size to allocate. Because the size will be extended automatically as needed, designate 0 if the buffer size is unknown.

outStreamRef

On normal completion, a pointer is specified to the stream object that was created.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

EdsCreateFileStream, EdsWrite, EdsRead, and EdsRelease

Note

- The stream you create must be released after use by means of EdsRelease.

3.1.34 EdsCreateMemoryStreamFromPointer

Description

Creates a stream from the memory buffer you prepare. Unlike the buffer size of streams created by means of EdsCreateMemoryStream, the buffer size you prepare for streams created this way does not expand.

Syntax

```
EdsError  EDSAPI  EdsCreateMemoryStreamFromPointer (
                                EdsVoid            *inUserBuffer,
                                EdsUInt32          inBufferSize,
                                EdsStreamRef        *outStream
                                );
```

Parameters

inUserBuffer

Pointer to the buffer you have prepared. Streams created by means of this API lead to this buffer.

inBufferSize

Designate the buffer size.

outStream

On normal completion, returns the stream to the designated buffer. Designate the reference to the EdsStreamRef type variable (that is, the address) as an argument.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsWrite, and EdsRelease

Note

- The size of streams created by means of this API does not change. Be careful to ensure that access to the created stream does not exceed the available space.

3.1.35 EdsGetPointer

Description

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Gets the pointer to the start address of memory managed by the memory stream.
As the EDS SDK automatically resizes the buffer, the memory stream provides you with the same access methods as for the file stream. If access is attempted that is excessive with regard to the buffer size for the stream, data before the required buffer size is allocated is copied internally, and new writing occurs. Thus, the buffer pointer might be switched on an unknown timing. Caution in use is therefore advised.

Syntax

```
EdsError EDSAPI EdsGetPointer(  
    EdsStreamRef inStream,  
    EdsVoid **outPointer  
);
```

Parameters

inStream

Designate the memory stream for the pointer to retrieve.

outPointer

If successful, returns the pointer to the buffer written in the memory stream.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsWrite, and EdsRelease

Note

- The buffer pointer may be switched on an unknown timing. Thus, some risk is posed by using this API so that saved pointers are saved and used in alternation. Caution in use is therefore advised.

3.1.36 EdsRead

Description

Reads data the size of inReadSize into the outBuffer buffer, starting at the current read or write position of the stream. The size of data actually read can be designated in outReadSize.

Syntax

```
EdsError EdsRead(  
    EdsStreamRef inStreamRef,  
    EdsUInt32 inReadSize,  
    EdsVoid *outBuffer,  
    EdsUInt32 *outReadSize )
```

Parameters

inStreamRef

Designate the file or memory stream.

inReadSize

Designate the size of data to read.

outBuffer

On normal completion, specifies the buffer storing read data.

outReadSize

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Specifies a pointer to the variable for receiving the size of data actually read.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsWrite, and EdsRelease

Note

- If reading is successful, the read or write position in the stream is moved ahead an amount corresponding to the size of data read.

3.1.37 EdsWrite

Description

Writes data of a designated buffer to the current read or write position of the stream.

Syntax

```
EdsError EdsWrite( EdsStreamRef inStreamRef, EdsUInt32 inWriteSize,
                  Const EdsVoid* inBuffer, EdsUInt32 *outWrittenSize )
```

Parameters

inStreamRef

Designate the destination stream for writing. The stream object must be retrieved in advance.

inWriteSize

Designate the size of data to write from the buffer.

inBuffer

Designate a pointer to the data to write.

outWrittenSize

Specifies a pointer to the variable for receiving the size of data actually written.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsRead, and EdsRelease

Note

- If writing is successful, the read or write position in the stream is moved ahead an amount corresponding to the size of data written.

3.1.38 EdsSeek

Description

Moves the read or write position of the stream (that is, the file position indicator).

Syntax

```
EdsError EdsSeek( EdsStreamRef inStreamRef, EdsInt32 inSeekOffset,
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

EdsSeekOrigin inSeekOrigin)

Parameters

inStreamRef

Designate the stream object for this operation.

inSeekOffset

Designate the number of bytes to move the file position indicator.

inSeekOrigin

Designate the origin for moving from the read or write position. Designate any of the following, as defined in enum EdsSeekOrigin.

Enum EdsSeekOrigin <defined location>EDSDKTypes.h

| InSeekOrigin | Description |
|----------------|---|
| kEdsSeek_Begin | Moves the file position indicator from the beginning of the stream forward by inOffset bytes. |
| kEdsSeek_Cur | Moves the file position indicator from the current position in the stream forward by inOffset bytes. |
| kEdsSeek_End | Moves the file position indicator from the end of the stream by inOffset bytes. To move toward the beginning, designate a negative value. Positive values will move the indicator beyond the end of the file. |

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsRead, and EdsWrite

3.1.39 EdsGetPosition

Description

Gets the current read or write position of the stream (that is, the file position indicator).

Syntax

EdsError EdsGetPosition(EdsStreamRef inStreamRef, EdsUInt32* outPosition)

Parameters

inStreamRef

Designate the destination stream for getting the position.

outPosition

On normal completion, specifies a pointer to the variable for receiving the current read or write position of the stream (that is, to the offset position from the beginning of the stream). (The beginning of the stream is 0.)

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsRead, EdsWrite, and EdsSeek

Note

- The stream's initial read or write position is 0. If EdsWrite or EdsRead is used to write or read from the stream, the indicator is moved an amount corresponding to that size in the positive direction.
- When intentionally changing the read or write position of the stream, use EdsSeek.

3.1.40 EdsGetLength

Description

Gets the stream size.

Syntax

```
EdsError EdsGetLength( EdsStreamRef inStreamRef, EdsUInt32 *outLength )
```

Parameters

inStreamRef

Designate the stream object for this operation.

outLength

Specifies the pointer to the variable for receiving the number of bytes of the stream.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, and EdsCreateFileStreamEx

3.1.41 EdsCopyData

Description

Copies data from the copy source stream to the copy destination stream.

The read or write position of the data to copy is determined from the current file read or write position of the respective stream.

After this API is executed, the read or write positions of the copy source and copy destination streams are moved an amount corresponding to inWriteSize in the positive direction.

Syntax

```
EdsError EdsCopyData(
    EdsStreamRef inStreamRef, EdsUInt32 inWriteSize,
    EdsStreamRef outStreamRef)
```

Parameters

inStreamRef

Designate the source stream for copying.

inWriteSize

Designate the number of bytes to copy .

outStreamRef

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Designate the destination stream for copying.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateMemoryStream, EdsCreateFileStream, EdsCreateFileStreamEx, EdsRead, EdsWrite, EdsSeek, and EdsGetPosition

3.1.42 EdsCreateImageRef

Description

Creates an image object from an image file.

Without modification, stream objects cannot be worked with as images. Thus, when extracting images from image files, you must use this API to create image objects.

The image object created this way can be used to get image information (such as the height and width, number of color components, and resolution), thumbnail image data, and the image data itself.

Syntax

```
EdsError EdsCreateImageRef( EdsStreamRef inStreamRef,
                           EdsImageRef *outImageRef )
```

Parameters

inStreamRef

Designate the image file (or image data in the memory stream).

outImageRef

Specifies the pointer to the variable for receiving the image object.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsCreateStream, EdsGetImageInfo, and EdsGetImage, EdsRelease

3.1.43 EdsGetImageInfo

Description

Gets image information from a designated image object.

Here, image information means the image width and height, number of color components, resolution, and effective image area.

Syntax

```
EdsError EdsGetImageInfo(
    EdsImageRef inImageRef, EdsImageSource inImageSource,
    EdsImageInfo* outImageInfo )
```

Parameters

inStreamRef

Designate the object for which to get image information.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

inImageSource

Of the various image data items in the image file, designate the type of image data representing the information you want to get. Designate the image as defined in Enum EdsImageSource.

Enum EdsImageSource <defined location>EDSDKTypes.h

| Value | Description |
|---------------------------|---------------------------------------|
| kEdsImageSrc_FullView | The image itself (a full-sized image) |
| kEdsImageSrc_Thumbnail | A thumbnail image |
| kEdsImageSrc_Preview | A preview image |
| kEdsImageSrc_RAWThumbnail | A RAW thumbnail image |
| kEdsImageSrc_RAWFullView | A RAW full-sized image |

outImageInfo

Stores the image data information designated in inImageSource.

| EdsImageInfo constituent elements | Type | Description |
|-----------------------------------|-----------|---|
| width | EdsUInt32 | Width (in pixels) |
| height | EdsUInt32 | Height (in pixels) |
| numOfComponents | EdsUInt32 | Number of color components |
| componentDepth | EdsUInt32 | Resolution (8-bit or 16-bit) Note: Image files may contain image data of mixed resolutions. |
| effectiveRect | EdsRect | Effective image area (This means the area excluding the black bands on the top and bottom of the thumbnail image.) |
| Reserved | EdsUInt32 | Reserved |

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

EdsCreateImageRef and EdsGetImage
- For information on data types of the EDS SDK, see "Data Types Used by the APIs" in the Appendix.

3.1.44 EdsGetImage

Description

Gets designated image data from an image file, in the form of a designated rectangle.

Returns uncompressed results for JPEG compressed images and processed results in the designated pixel order (RGB, Top-down BGR, and so on) for RAW images. Additionally, by designating the input/output rectangle, it is possible to get reduced, enlarged, or partial images. However, because images corresponding to the designated output rectangle are always returned by the SDK, the SDK does not take the aspect ratio into account. To maintain the aspect ratio, you must keep the aspect ratio in mind when designating the rectangle.

Syntax

```
EdsError EDSAPI EdsGetImage(
    EdsImageRef
    EdsImageSource
    inImageRef,
    inImageSource,
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

```

    EdsTargetImageType
    EdsRect
    EdsSize
    EdsStreamRef
    inImageType,
    inSrcRect,
    inDstSize,
    outStreamRef
);

```

Parameters

inImageRef

Designate the image object for which to get the image data.

inImageSource

Designate the type of image data to get from the image file (thumbnail, preview, and so on).

Designate values as defined in Enum EdsImageSource.

Enum EdsImageSource <defined location>EDSDKTypes.h

| Value | Description |
|---------------------------|--|
| kEdsImageSrc_FullView | The image itself (a full-sized image) |
| kEdsImageSrc_Thumbnail | A thumbnail image |
| kEdsImageSrc_Preview | A preview image (displayed on the back screen of the camera) |
| kEdsImageSrc_RAWThumbnail | A RAW thumbnail image |
| kEdsImageSrc_RAWFullView | A RAW full-sized image |

inImageType

Designate the output image type. Because the output format of EdGetImage may only be RGB, only

kEdsTargetImageType_RGB or **kEdsTargetImageType_RGB16** can be designated.

However, image types exceeding the resolution of inImageSource cannot be designated.

Example: Suppose the source image resolution (componentDepth) retrieved by means of **EdsGetImageInfo()** is 8 bits

→ The resolution that can be retrieved by means of EdsGetImage () is also 8 bits

→ Thus, only **kEdsTargetImageType_RGB** is available.

EdsTargetImageType <defined location>EDSDKTypes.h

| Value | Description |
|---------------------------|---------------------------|
| kEdsTargetImageType_RGB | 8-bit RGB, chunky format |
| kEdsTargetImageType_RGB16 | 16-bit RGB, chunky format |

inSrcRect

Designate the coordinates and size of the rectangle to be retrieved (processed) from the source image.

inDstSize

Designate the rectangle size for output.

outStreamRef

Designate the memory or file stream for output of the image.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

EdsCreateImageRef and EdsGetImageInfo

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Note

- To maintain the aspect ratio, you must keep the aspect ratio in mind when designating a rectangle.
- In calculating the data size of the output file, the original image data resolution is not used. Instead, the resolution of the image type designated by inImageType is used. For example, the calculation for kEdsTargetImageType_RGB is 3 (R, G, and B) x 8 (resolution) x width x height ÷ 8 (bytes). Similarly, kEdsTargetImageType_RGB16 is calculated by 3 x 16 x width x height ÷ 8 (bytes).

3.1.45 EdsSaveImage

Description

Saves as a designated image type after RAW processing.

When saving with JPEG compression, the JPEG quality setting applies with respect to EdsOptionRef.

Syntax

```
EdsError EDSAPI EdsSaveImage(
    EdsImageRef          inImageRef,
    EdsTargetImageType    inImageType,
    EdsSaveImageSetting  inSaveSetting,
    EdsStreamRef          outStreamRef
);
```

Parameters

inImageRef

Designate the image object for which to produce the file.

inImageType

Designate the image type to produce. Designate the following image types.

Enum EdsTargetImageType <defined location>EDSDKTypes.h

| Value | Description |
|----------------------------|-------------|
| kEdsTargetImageType_Jpeg | JPEG |
| kEdsTargetImageType_TIFF | 8-bit TIFF |
| kEdsTargetImageType_TIFF16 | 16-bit TIFF |

inSaveSetting

Designate saving options, such as JPEG quality.

EdsSaveImageSetting <defined location>EDSDKTypes.h

| EdsSaveImageSetting constituent elements | Type | Description |
|--|--------------|--|
| JPEGQuality | EdsUInt32 | Image quality for JPEG compression 1 (rough) to 10 (fine) |
| iccProfileStream | EdsStreamRef | ICC profile stream |
| reserved | EdsUInt32 | Reserved |

outStreamRef

Specifies the output file stream. The memory stream cannot be specified here.

Return Values

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

- Related APIs
EdsCreateFileStream, EdsCreateFileStreamEx, EdsRead, and EdsWrite
- For information on data types of the EDSDK, see "Data Types Used by the APIs" in the Appendix.

Note

3.1.46 EdsCacheImage

Description

Switches a setting on and off for creation of an image cache in the SDK for a designated image object during extraction (processing) of the image data. Creating the cache increases the processing speed, starting from the second time.

Syntax

```
EdsError  EDSAPI  EdsCacheImage(
                                EdsImageRef  inImageRef,
                                EdsBool       inUseCache
                                );
```

Parameters

inImageRef

Designate the image object.

inUseCache

TRUE: Image cache ON

FALSE: Image cache OFF

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsGetImage and EdsSaveImage

Note

- If the image cache is on, a corresponding amount of resources are consumed. If fast processing is not required, use the EDSDK with the cache off.

3.1.47 EdsSetCameraAddedHandler

Description

Registers a callback function for when a camera is detected.

Syntax

```
EdsError  EdsSetCameraAddedHandler (
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

EdsCameraAddedHandler in**CameraAddedHandler**,
EdsVoid* in**Context**)

Parameters

inCameraAddedHandler

Designate the pointer to the callback function called when a camera is detected.
You must implement the callback function registered this way following a prescribed type definition.
The callback function type is defined as follows.

Syntax

```
typedef EdsError
( EDSCALLBACK * EdsCameraAddedHandler)(EdsVoid *inContext )
```

Parameters

inContext

Passes data for the application designated by **EdsSetCameraAddedHandler**.

Return Values

Returns EDS_ERR_OK if successful. Otherwise, ensure the implementation returns an appropriate error code. (See the [EDS Error Lists](#)).

inContext

Designate application information to be passed by means of the callback function. Any data needed for your application can be passed.

In multithreaded environments, the callback function is executed by a thread exclusively for the event. Use it appropriately, as in designating the this pointer to pass data to UI threads.

Designate a NULL pointer if it is not needed.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsSetPropertyEventHandler, EdsSetObjectEventHandler, EdsSetCameraStateEventHandler, and
EdsSetProgressCallback

3.1.48 EdsSetObjectEventHandler

Description

Registers a callback function for receiving status change notification events for objects on a remote camera.
Here, object means volumes representing memory cards, files and directories, and shot images stored in memory, in particular.

Syntax

```
EdsError EdsSetObjectEventHandler( EdsCameraRef inCameraRef,
                                   EdsObjectEvent inEvent,
                                   EdsObjectEventHandler inObjectEventHandler,
                                   EdsVoid *inContext )
```

Parameters

inCameraRef

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Designate the camera object.

inEvent

Designate one or all events to be supplemented. To designate all events, use kEdsObjectEvent_All. For details on events that can be designated, refer to the section on object-related events in the event lists of [Asynchronous Events](#).

inObjectEventHandler

Designate the pointer to the callback function for receiving object-related camera events. The callback function registered here is called by the EDS SDK when the event is received.

To cancel supplementation of the event designated in the event type, designate NULL in this argument.

You must implement the callback function registered this way following a prescribed type definition.

The callback function type for object-related events is defined as follows.

Syntax

```
typedef EdsError ( EDSCALLBACK *EdsObjectEventHandler)(
                                EdsObjectEvent inEvent,
                                EdsBaseRef inRef,
                                EdsVoid *inContext) ;
```

Parameters

inEvent

Indicate the event type supplemented. Designate one of the event types for supplementation, as designated by EdsSetObjectEventHandler. Events that occur can be determined based on the event type.

inRef

Returns a reference to objects created by the event.

inContext

Passes inContext without modification, as designated as an **EdsSetObjectEventHandler** argument.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

inContext

Designate application information to be passed by means of the callback function. Any data needed for your application can be passed.

In multithreaded environments, the callback function is executed by a thread exclusively for the event. Use it appropriately, as in designating the this pointer to pass data to UI threads. Designate a NULL pointer if it is not needed.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

EdsSetCameraAddedHandler, EdsSetPropertyEventHandler, EdsSetCameraStateEventHandler, and EdsSetProgressCallback
- For details on asynchronous events, refer to "Overview" and "Asynchronous Events."

Note

- To release the event handler for events of the designated type, designate NULL in the argument of inObjectEventHandler. (The event will not occur.)

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Example

- See [Sample 1](#).

3.1.49 EdsSetPropertyEventHandler

Description

Registers a callback function for receiving status change notification events for property states on a camera.

Syntax

```
EdsError EDSAPI EdsSetPropertyEventHandler(
    EdsCameraRef          inCameraRef,
    EdsPropertyEvent      inEvnet,
    EdsPropertyEventHandler inPropertyEventHandler,
    EdsVoid*              inContext );
```

Parameters

inCameraRef

Designate the camera object.

inEvent

Designate one or all events to be supplemented. To designate all events, use kEdsPropertyEvent_All.

For details on events that can be designated, refer to the section on property-related events in the event lists of [Asynchronous Events](#).

inPropertyEventHandler

Designate the pointer to the callback function for receiving property-related camera events. The callback function registered here is called by the EDS SDK when the event is received.

To cancel supplementation of the event designated in the event type, designate NULL in this argument.

You must implement the callback function registered this way following a prescribed type definition.

The callback function type for property-related events is defined as follows.

Syntax

```
typedef EdsError ( EDSCALLBACK * EdsPropertyEventHandler )(
    EdsPropertyEvent      inEvent,
    EdsPropertyID         inPropertyID,
    EdsUInt32             inParam,
    EdsVoid               *inContext );
```

Parameters

inEvent

Indicate the event type supplemented. Designate one of the event types subject to supplementation, as designated by EdsSetPropertyEventHandler. Events that occur can be determined based on the event type.

inPropertyID

Returns the property ID created by the event.

inParam

Used to identify information created by the event for custom function (CF) properties or other properties that have multiple items of information.

inContext

Passes inContext without modification, as designated as an **EdsSetPropertyEventHandler**

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

argument.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

inContext

Designate application information to be passed by means of the callback function. Any data needed for your application can be passed.

In multithreaded environments, the callback function is executed by a thread exclusively for the event. Use it appropriately, as in designating the this pointer to pass data to UI threads. Designate a NULL pointer if it is not needed.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

- For details on asynchronous events, refer to "Overview" and "Asynchronous Events."

Note

- To release the event handler for events of the designated type, designate NULL in the argument of inPropertyEventHandler. (The event will not occur.)

Example

- See [Sample 1](#).

3.1.50 EdsSetCameraStateEventHandler

Description

Registers a callback function for receiving status change notification events for camera objects.

Syntax

```
EdsError EDSAPI EdsSetCameraStateEventHandler(
    EdsCameraRef      inCameraRef,
    EdsStateEvent      inEvnet,
    EdsStateEventHandler inStateEventHandler,
    EdsVoid*           inContext );
```

Parameters

inCameraRef

Designate the camera object.

inEvent

Designate one or all events to be supplemented. To designate all events, use kEdsStateEvent_All.

For details on events that can be designated, refer to the section on events related to camera states in the event lists of [Asynchronous Events](#).

inStateEventHandler

Designate the pointer to the callback function for receiving events related to camera object states. The callback

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

function registered here is called by the EDSDK when the event is received.
To cancel supplementation of the event designated in the event type, designate NULL in this argument.
You must implement the callback function registered this way following a prescribed type definition.
The callback function type for events related to camera states is defined as follows.

Syntax

```
typedef EdsError ( EDSCALLBACK *EdsStateEventHandler )(
    EdsStateEvent    inEvent,
    EdsUInt32        inEventData,
    EdsVoid          *inContext );
```

Parameters

inEvent

Indicate the event type supplemented. Designate one of the event types subject to supplementation, as designated by EdsSetPropertyEventHandler. Events that occur can be determined based on the event type.

inEventData

Pointer to the event data. The content designated here varies depending on the property type. For details, see [Property Details](#).

inContext

Passes inContext without modification, as designated as an **EdsSetCameraStateEventHandler** argument.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

inContext

Designate application information to be passed by means of the callback function. Any data needed for your application can be passed.

In multithreaded environments, the callback function is executed by a thread exclusively for the event. Use it appropriately, as in designating the this pointer to pass data to UI threads. Designate a NULL pointer if it is not needed.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

EdsSetCameraAddedHandler, EdsObjectEventHandler, EdsSetObjectEventHandler, and EdsSetProgressCallback
- For details on asynchronous events, refer to "Overview" and "Asynchronous Events."

Note

- To release the event handler for events of the designated type, designate NULL in the argument of inStateEventHandler. (The event will not occur.)

3.1.51 EdsSetProgressCallback

Description

Register a progress callback function.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

An event is received as notification of progress during processing that takes a relatively long time, such as downloading files from a remote camera. If you register the callback function, the EDSDK calls the callback function during execution or on completion of the following APIs. This timing can be used in updating on-screen progress bars, for example.

| APIs for which the progress callback function is valid |
|--|
| EdsCopyData |
| EdsDownload |
| EdsGetImage |
| EdsSaveImage |

Syntax

```
EdsError EdsSetProgressCallback(
    EdsBaseRef          inRef,
    EdsProgressFunc     inProgressCallback,
    EdsProgressOption    inProgressOption,
    EdsVoid*            inContext)
```

Parameters

inRef

Designate the relevant object.

EdsImageRef or EdsStreamRef are the objects of APIs for which progress callback registration is valid.

inProgressCallback

Designate a pointer to the progress callback function.

The progress callback function type is defined as follows.

Syntax

```
typedef EdsError( EDSCALLBACK * EdsProgressCallback )(
    EdsUInt32    inPercent,
    EdsVoid      *inContext,
    EdsBool      *outCancel )
```

Parameters

inPercent

Indicates the progress in a range of 0 –100%. Value range: 0 to 100

inContext

The application information designated by EdsSetProgressCallback.

outCancel

To cancel processing in progress, set this variable to TRUE.

For example, if this argument is set to TRUE during file transfer from the camera, the EDSDK notifies the camera that file transfer has been canceled, and transfer of those files is canceled.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

inProgressOption

Options when this callback function is called are defined in Enum EdsProgressOption.

Enum EdsProgressOption <defined location>EDSDKTypes.h

| Value | Description |
|-------|-------------|
|-------|-------------|

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|---------------------------------|---|
| kEdsProgressOption_NoReport | Do not call a progress callback function. |
| kEdsProgressOption_Done | Call a progress callback function when the progress reaches 100%. |
| kEdsProgressOption_Periodically | Call a progress callback function periodically. |

inContext

Application information, passed in the argument when the callback function is called. Any information required for your program may be added.

Return Values

Returns EDS_ERR_OK if successful. In other cases, see the [EDS Error Lists](#).

See Also

- Related APIs
EdsSetCameraAddedHandler and EdsSetObjectEventHandler

Note

- To release the event handler for events of the designated type, designate NULL in the argument of inStateEventHandler. (The event will not occur.)

3.2 EDS Error Lists

As return values, EDSDK APIs return error codes defined as follows.

For each API, the return values mainly used are identified based on API characteristics. However, the principal factors that actually caused the problems are specified as error codes. Thus, all error codes may be specified in return values.

3.2.1 General errors

| Error Type | Notes |
|-------------------------------|-------------------------|
| EDS_ERR_UNIMPLEMENTED | Not implemented |
| EDS_ERR_INTERNAL_ERROR | Internal error |
| EDS_ERR_MEM_ALLOC_FAILED | Memory allocation error |
| EDS_ERR_MEM_FREE_FAILED | Memory release error |
| EDS_ERR_OPERATION_CANCELLED | Operation canceled |
| EDS_ERR_INCOMPATIBLE_VERSION | Version error |
| EDS_ERR_NOT_SUPPORTED | Not supported |
| EDS_ERR_UNEXPECTED_EXCEPTION | Unexpected exception |
| EDS_ERR_PROTECTION_VIOLATION | Protection violation |
| EDS_ERR_MISSING_SUBCOMPONENT | Missing subcomponent |
| EDS_ERR_SELECTION_UNAVAILABLE | Selection unavailable |

3.2.2 File access errors

| Error Type | Notes |
|----------------------------------|---------------------|
| EDS_ERR_FILE_IO_ERROR | IO error |
| EDS_ERR_FILE_TOO_MANY_OPEN | Too many files open |
| EDS_ERR_FILE_NOT_FOUND | File does not exist |
| EDS_ERR_FILE_OPEN_ERROR | Open error |
| EDS_ERR_FILE_CLOSE_ERROR | Close error |
| EDS_ERR_FILE_SEEK_ERROR | Seek error |
| EDS_ERR_FILE_TELL_ERROR | Tell error |
| EDS_ERR_FILE_READ_ERROR | Read error |
| EDS_ERR_FILE_WRITE_ERROR | Write error |
| EDS_ERR_FILE_PERMISSION_ERROR | Permission error |
| EDS_ERR_FILE_DISK_FULL_ERROR | Disk full |
| EDS_ERR_FILE_ALREADY_EXISTS | File already exists |
| EDS_ERR_FILE_FORMAT_UNRECOGNIZED | Format error |
| EDS_ERR_FILE_DATA_CORRUPT | Invalid data |
| EDS_ERR_FILE_NAMING_NA | File naming error |

3.2.3 Directory errors

| Error Type | Notes |
|-----------------------------|--------------------------|
| EDS_ERR_DIR_NOT_FOUND | Directory does not exist |
| EDS_ERR_DIR_IO_ERROR | I/O error |
| EDS_ERR_DIR_ENTRY_NOT_FOUND | No file in directory |
| EDS_ERR_DIR_ENTRY_EXISTS | File in directory |
| EDS_ERR_DIR_NOT_EMPTY | Directory full |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|--|--|
| | |
|--|--|

3.2.4 Property errors

| Error Type | Notes |
|--------------------------------|--|
| EDS_ERR_PROPERTIES_UNAVAILABLE | Property (and additional property information) unavailable |
| EDS_ERR_PROPERTIES_MISMATCH | Property mismatch |
| EDS_ERR_PROPERTIES_NOT_LOADED | Property not loaded |
| | |

3.2.5 Function parameter errors

| Error Type | Notes |
|----------------------------|----------------------------|
| EDS_ERR_INVALID_PARAMETER | Invalid function parameter |
| EDS_ERR_INVALID_HANDLE | Handle error |
| EDS_ERR_INVALID_POINTER | Pointer error |
| EDS_ERR_INVALID_INDEX | Index error |
| EDS_ERR_INVALID_LENGTH | Length error |
| EDS_ERR_INVALID_FN_POINTER | FN pointer error |
| EDS_ERR_INVALID_SORT_FN | Sort FN error |
| | |

3.2.6 Device errors

| Error Type | Notes |
|----------------------------------|---|
| EDS_ERR_DEVICE_NOT_FOUND | Device not found |
| EDS_ERR_DEVICE_BUSY | Device busy Note: If a device busy error occurs, reissue the command after a while. The camera will become unstable. |
| EDS_ERR_DEVICE_INVALID | Device error |
| EDS_ERR_DEVICE_EMERGENCY | Device emergency |
| EDS_ERR_DEVICE_MEMORY_FULL | Device memory full |
| EDS_ERR_DEVICE_INTERNAL_ERROR | Internal device error |
| EDS_ERR_DEVICE_INVALID_PARAMETER | Device parameter invalid |
| EDS_ERR_DEVICE_NO_DISK | No disk |
| EDS_ERR_DEVICE_DISK_ERROR | Disk error |
| EDS_ERR_DEVICE_CF_GATE_CHANGED | The CF gate has been changed |
| EDS_ERR_DEVICE_DIAL_CHANGED | The dial has been changed |
| EDS_ERR_DEVICE_NOT_INSTALLED | Device not installed |
| EDS_ERR_DEVICE_STAY_AWAKE | Device connected in awake mode |
| EDS_ERR_DEVICE_NOT_RELEASED | Device not released |
| | |

3.2.7 Stream errors

| Error Type | Notes |
|-----------------------------|---------------------|
| EDS_ERR_STREAM_IO_ERROR | Stream I/O error |
| EDS_ERR_STREAM_NOT_OPEN | Stream open error |
| EDS_ERR_STREAM_ALREADY_OPEN | Stream already open |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|--------------------------------------|-----------------------------------|
| EDS_ERR_STREAM_OPEN_ERROR | Failed to open stream |
| EDS_ERR_STREAM_CLOSE_ERROR | Failed to close stream |
| EDS_ERR_STREAM_SEEK_ERROR | Stream seek error |
| EDS_ERR_STREAM_TELL_ERROR | Stream tell error |
| EDS_ERR_STREAM_READ_ERROR | Failed to read stream |
| EDS_ERR_STREAM_WRITE_ERROR | Failed to write stream |
| EDS_ERR_STREAM_PERMISSION_ERROR | Permission error |
| EDS_ERR_STREAM_COULDNT_BEGIN_TH_READ | Could not start reading thumbnail |
| EDS_ERR_STREAM_BAD_OPTIONS | Invalid stream option |
| EDS_ERR_STREAM_END_OF_STREAM | Invalid stream termination |
| | |

3.2.8 Communication errors

| Error Type | Notes |
|----------------------------------|---------------------|
| EDS_ERR_COMM_PORT_IS_IN_USE | Port in use |
| EDS_ERR_COMM_DISCONNECTED | Port disconnected |
| EDS_ERR_COMM_DEVICE_INCOMPATIBLE | Incompatible device |
| EDS_ERR_COMM_BUFFER_FULL | Buffer full |
| EDS_ERR_COMM_USB_BUS_ERR | USB bus error |
| | |

3.2.9 Camera UI lock/unlock errors

| Error Type | Notes |
|---------------------------------|-------------------------|
| EDS_ERR_USB_DEVICE_LOCK_ERROR | Failed to lock the UI |
| EDS_ERR_USB_DEVICE_UNLOCK_ERROR | Failed to unlock the UI |
| | |

3.2.10 STI/WIA errors

| Error Type | Notes |
|----------------------------------|-----------------------|
| EDS_ERR_STI_UNKNOWN_ERROR | Unknown STI |
| EDS_ERR_STI_INTERNAL_ERROR | Internal STI error |
| EDS_ERR_STI_DEVICE_CREATE_ERROR | Device creation error |
| EDS_ERR_STI_DEVICE_RELEASE_ERROR | Device release error |
| EDS_ERR_DEVICE_NOT_LAUNCHED | Device startup failed |
| | |

3.2.11 Other general error

| Error Type | Notes |
|-------------------------------------|---|
| EDS_ERR_ENUM_NA | Enumeration terminated (there was no suitable enumeration item) |
| EDS_ERR_INVALID_FN_CALL | Called in a mode when the function could not be used |
| EDS_ERR_HANDLE_NOT_FOUND | Handle not found |
| EDS_ERR_INVALID_ID | Invalid ID |
| EDS_ERR_WAIT_TIMEOUT_ERROR | Timeout |
| EDS_ERR_LAST_GENERIC_ERROR_PLUS_ONE | Not used. |

| Revision History/Date | Corrections | Reviser | Remarks |

3.2.12 PTP errors

| Error Type | Notes |
|--|--|
| EDS_ERR_SESSION_NOT_OPEN | Session open error |
| EDS_ERR_INVALID_TRANSACTIONID | Invalid transaction ID |
| EDS_ERR_INCOMPLETE_TRANSFER | Transfer problem |
| EDS_ERR_INVALID_STRAGEID | Storage error |
| EDS_ERR_DEVICEPROP_NOT_SUPPORTED | Unsupported device property |
| EDS_ERR_INVALID_OBJECTFORMATCODE | Invalid object format code |
| EDS_ERR_SELF_TEST_FAILED | Failed self-diagnosis |
| EDS_ERR_PARTIAL_DELETION | Failed in partial deletion |
| EDS_ERR_SPECIFICATION_BY_FORMAT_UNSUPPORTED | Unsupported format specification |
| EDS_ERR_NO_VALID_OBJECTINFO | Invalid object information |
| EDS_ERR_INVALID_CODE_FORMAT | Invalid code format |
| EDS_ERR_UNKNOWN_VENDOR_CODE | Unknown vendor code |
| EDS_ERR_CAPTURE_ALREADY_TERMINATED | Capture already terminated |
| EDS_ERR_INVALID_PARENTOBJECT | Invalid parent object |
| EDS_ERR_INVALID_DEVICEPROP_FORMAT | Invalid property format |
| EDS_ERR_INVALID_DEVICEPROP_VALUE | Invalid property value |
| EDS_ERR_SESSION_ALREADY_OPEN | Session already open |
| EDS_ERR_TRANSACTION_CANCELLED | Transaction canceled |
| EDS_ERR_SPECIFICATION_OF_DESTINATION_UNSUPPORTED | Unsupported destination specification |
| EDS_ERR_UNKNOWN_COMMAND | Unknown command |
| EDS_ERR_OPERATION_REFUSED | Operation refused |
| EDS_ERR_LENS_COVER_CLOSE | Lens cover closed |
| EDS_ERR_OBJECT_NOTREADY | Image data set not ready for live view |

3.2.13 TakePicture errors

| Error Type | Notes |
|---|--|
| EDS_ERR_TAKE_PICTURE_AF_NG | Focus failed |
| EDS_ERR_TAKE_PICTURE_RESERVED | Reserved |
| EDS_ERR_TAKE_PICTURE_MIRROR_UP_NG | Currently configuring mirror up |
| EDS_ERR_TAKE_PICTURE_SENSOR_CLEANING_NG | Currently cleaning sensor |
| EDS_ERR_TAKE_PICTURE_SILENCE_NG | Currently performing silent operations |
| EDS_ERR_TAKE_PICTURE_NO_CARD_NG | Card not installed |
| EDS_ERR_TAKE_PICTURE_CARD_NG | Error writing to card |
| EDS_ERR_TAKE_PICTURE_CARD_PROTECT_NG | Card write protected |

4. Asynchronous Events

In the case of asynchronous events, notify the host computer of changes, such as changes in the state of properties of remote cameras.

To enable an application to receive issued events, you must prepare callback functions for event reception and register them in the EDSDK by means of `EdsSetPropertyEventHandler`, `EdsSetObjectEventHandler`, `EdsSetCameraStateEventHandler`, `EdsSetCameraAddedHandler`, `EdsSetProgressCallback`, or other APIs for configuring callback functions.

For details on callback function types, see the parameters information of the APIs for callback function configuration.

This section describes events that can be retrieved by callback functions registered using `EdsSetPropertyEventHandler`, `EdsSetObjectEventHandler`, and `EdsSetCameraStateEventHandler` in particular.

4.1 Event Lists

4.1.1 Object-related events

| Events |
|--|
| Notification of file creation |
| Notification of file deletion |
| Notification of changes in file information |
| Notification of changes in the volume information of recording media |
| Notification of requests to update volume information |
| Notification of requests to update folder information |
| Notification of file transfer requests |
| Notification of direct transfer requests |
| Notification of requests to cancel direct transfer |

4.1.2 Property-related events

| Events |
|---|
| Notification of property state changes |
| Notification of state changes in configurable property values |

4.1.3 State-related events

| Events |
|---|
| Notification of camera disconnection |
| Notification of changes in job states |
| Notification of warnings when the camera will shut off |
| Notification that the camera will remain on for a longer period |
| Notification of remote release failure |
| Notification of internal SDK errors |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

4.2 Event Details

Events are explained in the following format.

4.2.xx EventID

Event ID of the issued event. Used to distinguish event types in callback functions.

Description

Explains the event and cites related considerations.

Event Data

Event data passed as event callback function arguments.

| Event Data | Data Type | Argument Name in the Callback Function |
|---------------------------------------|---------------|--|
| The nature of the data that is passed | The data type | The value passed as an argument |

4.2.1 kEdsStateEvent_Shutdown (Notification of camera disconnection)

Description

Indicates that a camera is no longer connected to a computer, whether it was disconnected by unplugging a cord, opening the compact flash compartment, turning the camera off, auto shut-off, or by other means.

Event Data

| Event Data | Data Type | Value of inParameter |
|------------|-----------|----------------------|
| None | — | — |

4.2.2 kEdsPropertyEvent_PropertyChanged (Notification of property state changes)

Description

Notifies that a camera property value has been changed.

The changed property can be retrieved from event data.

The changed value can be retrieved by means of EdsGetPropertyData.

In the case of type 1 protocol standard cameras, notification of changed properties can only be issued for custom functions (CFn).

If the property type is 0x0000FFFF, the changed property cannot be identified. Thus, retrieve all required properties repeatedly.

Event Data

| Event Data | Data Type | Value of inPropertyID |
|-------------------|---------------|-----------------------|
| The property type | EdsPropertyID | A property ID |

See Also

- For details on property IDs, see the [Property Lists](#).

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

4.2.3 kEdsPropertyEvent_PropertyDescChanged (Notification of state changes in configurable property values)

Description

Notifies of changes in the list of camera properties with configurable values.

The list of configurable values for property IDs indicated in event data can be retrieved by means of EdsGetPropertyDesc.

For type 1 protocol standard cameras, the property ID is identified as "Unknown" during notification. Thus, you must retrieve a list of configurable values for all properties and retrieve the property values repeatedly. (For details on properties for which you can retrieve a list of configurable properties, see the description of EdsGetPropertyDesc).

Event Data

| Event Data | Data Type | Value of inPropertyID |
|---|---------------|--|
| Property type for which the list of configurable values has changed | EdsPropertyID | Of the capture-related properties, those properties that have configurable values that can be retrieved; otherwise, "Unknown" (0x0000FFFF) |

See Also

For details on property IDs, see the [Property Lists](#).

4.2.4 kEdsObjectEvent_DirItemCreated (Notification of file creation)

Description

Notifies of the creation of objects such as new folders or files on a camera compact flash card or the like.

This event is generated if the camera has been set to store captured images simultaneously on the camera and a computer, for example, but not if the camera is set to store images on the computer alone.

Newly created objects are indicated by event data.

Because objects are not indicated for type 1 protocol standard cameras, (that is, objects are indicated as NULL), you must again retrieve child objects under the camera object to identify the new objects.

Event Data

| Event Data | Data Type | Value of inRef |
|------------------------------|---------------------|---|
| New directory or file object | EdsDirectoryItemRef | Pointer to the directory or file object |

4.2.5 kEdsObjectEvent_DirItemRemoved (Notification of file deletion)

Description

Notifies of the deletion of objects such as folders or files on a camera compact flash card or the like.

Deleted objects are indicated in event data.

Because objects are not indicated for type 1 protocol standard cameras, you must again retrieve child objects under the camera object to identify deleted objects.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Event Data

| Event Data | Data Type | Value of inRef |
|----------------------------------|---------------------|---|
| Deleted directory or file object | EdsDirectoryItemRef | Pointer to the directory or file object |

4.2.6 kEdsObjectEvent_DirItemInfoChanged (Notification of changes in file information)

Description

Notifies that information of DirItem objects has been changed.
 Changed objects are indicated by event data.
 The changed value can be retrieved by means of EdsGetDirectoryItemInfo.
 Notification of this event is not issued for type 1 protocol standard cameras.

Event Data

| Event Data | Data Type | Value of inRef |
|----------------------------------|---------------------|---|
| Changed directory or file object | EdsDirectoryItemRef | Pointer to the directory or file object |

4.2.7 kEdsObjectEvent_DirItemContentChanged

Description

Notifies that header information has been updated, as for rotation information of image files on the camera.
 If this event is received, get the file header information again, as needed.
 This function is for type 2 protocol standard cameras only.

Event Data

| Event Data | Data Type | Value of inRef |
|--------------|---------------------|--------------------------------------|
| Changed file | EdsDirectoryItemRef | Pointer to the directory item object |

Note

To retrieve image properties, you must obtain them from image objects after using DownloadImage or DownloadThumbnail.

4.2.8 kEdsObjectEvent_VolumeInfoChanged (Notification of changes in the volume information of recording media)

Description

Notifies that the volume object (memory card) state (VolumeInfo) has been changed.
 Changed objects are indicated by event data.
 The changed value can be retrieved by means of EdsGetVolumeInfo.

Notification of this event is not issued for type 1 protocol standard cameras.

Event Data

| Event Data | Data Type | Value of inRef |
|-----------------------|--------------|------------------------------|
| Changed volume object | EdsVolumeRef | Pointer to the volume object |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

4.2.9 kEdsObjectEvent_VolumeUpdateItems (Notification of requests to update volume information)

Description

Notifies if the designated volume on a camera has been formatted. If notification of this event is received, get sub-items of the designated volume again as needed.

Changed volume objects can be retrieved from event data.

Objects cannot be identified on cameras earlier than the D30 if files are added or deleted. Thus, these events are subject to notification.

Event Data

| Event Data | Data Type | Value of inRef |
|-----------------------|--------------|------------------------------|
| Changed volume object | EdsVolumeRef | Pointer to the volume object |

4.2.10 kEdsObjectEvent_FolderUpdateItems (Notification of requests to update folder information)

Description

Notifies if many images are deleted in a designated folder on a camera. If notification of this event is received, get sub-items of the designated folder again as needed.

Changed folders (specifically, directory item objects) can be retrieved from event data.

Event Data

| Event Data | Data Type | Value of inRef |
|----------------|---------------------|--------------------------------------|
| Changed folder | EdsDirectoryItemRef | Pointer to the directory item object |

4.2.11 kEdsStateEvent_JobStatusChanged (Notification of changes in job states)

Description

Notifies of whether or not there are objects waiting to be transferred to a host computer.

This is useful when ensuring all shot images have been transferred when the application is closed.

Notification of this event is not issued for type 1 protocol standard cameras.

Event Data

| Event Data | Data Type | Value of inParameter |
|--|-----------|---|
| Whether or not there are objects waiting to be transferred | EdsUInt32 | 1: There are objects to be transferred 0: There are no objects to be transferred |

4.2.12 kEdsObjectEvent_DirItemRequestTransfer (Notification of file transfer requests)

Description

Notifies that there are objects on a camera to be transferred to a computer.

This event is generated after remote release from a computer or local release from a camera.

If this event is received, objects indicated in the event data must be downloaded. Furthermore, if the application does not require the objects, instead of downloading them, execute EdsDownloadCancel and release resources held by the camera.

The order of downloading from type 1 protocol standard cameras must be the order in which the events are received.

Event Data

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| Event Data | Data Type | Value of inRef |
|--|---------------------|--------------------------|
| Array of directories or file objects to be transferred | EdsDirectoryItemRef | Directory or file object |

4.2.13 kEdsObjectEvent_DirItemRequestTransferDT (Notification of direct transfer requests)

Description

Notifies if the camera's direct transfer button is pressed.

If this event is received, objects indicated in the event data must be downloaded. Furthermore, if the application does not require the objects, instead of downloading them, execute EdsDownloadCancel and release resources held by the camera.

Notification of this event is not issued for type 1 protocol standard cameras.

Event Data

| Event Data | Data Type | Value of inRef |
|---|------------------------|---------------------------------------|
| Array of directories or file objects to be transferred directly | EdsDirectoryItemRef [] | Array of directories and file objects |

4.2.14 kEdsObjectEvent_DirItemCancelTransferDT (Notification of requests to cancel direct transfer)

Description

Notifies of requests from a camera to cancel object transfer if the button to cancel direct transfer is pressed on the camera.

If the parameter is 0, it means that cancellation of transfer is requested for objects still not downloaded, with these objects indicated by kEdsObjectEvent_DirItemRequestTransferDT.

Notification of this event is not issued for type 1 protocol standard cameras.

Event Data

| Event Data | Data Type | Value of inRef |
|---|------------------------|---------------------------------------|
| Array of directories or file objects for which to cancel transfer | EdsDirectoryItemRef [] | Array of directories and file objects |

4.2.15 kEdsStateEvent_WillSoonShutDown (Notification of warnings when the camera will shut off)

Description

Notifies that the camera will shut down after a specific period.

Generated only if auto shut-off is set.

Exactly when notification is issued (that is, the number of seconds until shutdown) varies depending on the camera model.

To continue operation without having the camera shut down, use EdsSendCommand to extend the auto shut-off timer. The time in seconds until the camera shuts down is returned as the initial value.

Event Data

| Event Data | Data Type | Value of inParameter |
|---|-----------|----------------------|
| Number of seconds until the camera shuts down | EdsUInt32 | Number of seconds |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

4.2.16 kEdsStateEvent_ShutDownTimerUpdate (Notification that the camera will remain on for a longer period)

Description

As the counterpart event to kEdsStateEvent_WillSoonShutDown, this event notifies of updates to the number of seconds until a camera shuts down. After the update, the period until shutdown is model-dependent.

Event Data

| Event Data | Data Type | Value of inParameter |
|------------|-----------|----------------------|
| None | — | — |

4.2.17 kEdsStateEvent_CaptureError (Notification of remote release failure)

Description

Notifies that a requested release has failed, due to focus failure or similar factors.

Event Data

| Event Data | Data Type | Value of inParameter |
|------------|-----------|----------------------|
| Error code | EdsUInt32 | Error code |

Error codes received in the event data are as follows.

| Error Code | Description |
|------------|--|
| 0x00000001 | Shooting failure |
| 0x00000002 | The lens was closed |
| 0x00000003 | General errors from the shooting mode, such as errors from the bulb or mirror-up mechanism |
| 0x00000004 | Sensor cleaning |
| 0x00000005 | Error because the camera was set for silent operation (in PF21) |
| 0x00000006 | Prohibited settings using CFn-2, and no card inserted |
| 0x00000007 | Card error (including CARD-FULL/No.-FULL) |
| 0x00000008 | Write-protected |
| | |

4.2.18 kEdsStateEvent_BulbExposureTime

Description

Notifies of the exposure time during bulb shooting. Events are issued in about one-second intervals during bulb shooting.

However, this event is only issued when bulb shooting is started remotely.

(kEdsCameraCommand_BulbStart)

Event Data

| Event Data | Data Type | Value of inParameter |
|------------|-----------|----------------------------|
| Error code | EdsUInt32 | Exposure time (in seconds) |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

4.2.19 kEdsStateEvent_InternalError (Notification of internal SDK errors)

Description

Notifies of internal SDK errors.

If this error event is received, the issuing device will probably not be able to continue working properly, so cancel the remote connection.

Event Data

| Event Data | Data Type | Value of inParameter |
|------------|-----------|----------------------|
| — | EdsUInt32 | Unspecified value |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5. Properties

Properties of camera and images objects can be retrieved and set by means of **EdsGetPropertyData**, **EdsSetPropertyData**, and other APIs.

For certain properties, if the target object is a camera, you can use the **EdsGetPropertyDesc** API to get the properties that can currently be set. For details, see the description of **EdsGetPropertyDesc**.

If the target object is an image, it has properties besides current settings values—specifically, properties that store settings values at the time the image was shot. Current property settings values are usually indicated, assuming you do not particularly need the previous values. However, by designating a property ID and an OR value for **kEdsPropID_AtCapture_Flag** in the arguments for **EdsGetPropertyData**, you can get the properties at the time of shooting. For details, see the description of **kEdsPropID_AtCapture_Flag** properties.

For the various properties there are, this section explains the objects they describe and what the properties mean.

5.1 Property Lists

Property IDs are listed below. <defined location>EDSDKTypes.h

■ Camera Setting Properties

| Value | Description |
|------------|---|
| 0x00000002 | Product name |
| 0x00000003 | Body ID |
| 0x00000004 | Owner |
| 0x00000005 | Manufacturer |
| 0x00000006 | For cameras, the system time; for images, the shooting time |
| 0x00000007 | Firmware version |
| 0x00000008 | Battery state: 0–100% or "AC" |
| 0x00000009 | Custom Function settings |
| 0x0000000a | Personal Function settings |
| 0x0000000b | Destination where image was saved |

■ Image Properties

| Value | Description |
|------------|--|
| 0x00000100 | Stored image |
| 0x00000101 | Value representing compression when saved as a JPEG; 1 to 10 (cap) |
| 0x00000102 | Image orientation |
| 0x00000103 | ICC Profile data |
| 0x00000104 | Focus information |
| 0x00000105 | Digital exposure compensation |
| 0x00000106 | White balance (light source) |
| 0x00000107 | Color temperature setting value |
| 0x00000108 | White balance shift compensation |
| 0x00000109 | Contrast setting |
| 0x0000010a | Saturation setting |
| 0x0000010b | Color tone setting |
| 0x0000010c | Sharpness setting value |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|------------|---|
| 0x0000010d | Color space setting |
| 0x0000010e | Tone curve (standard or custom) |
| 0x0000010f | Color effect setting |
| 0x00000110 | Filter effect setting |
| 0x00000111 | Gradation effect setting |
| 0x00000112 | Processing parameter setting |
| 0x00000113 | Color matrix setting |
| 0x00000114 | Picture style |
| 0x00000115 | Picture style setting details |
| 0x00000200 | Computer settings caption for the picture style at the time of shooting |

■ Develop Properties

| Value | Description |
|------------|--------------------------|
| 0x00000300 | Linear processing ON/OFF |
| 0x00000301 | Click WB coordinates |
| 0x00000302 | WB control value |

■ Capture Properties

| Value | Description |
|------------|---|
| 0x00000400 | Shooting mode |
| 0x00000401 | Drive mode (cap) |
| 0x00000402 | ISO sensitivity setting value |
| 0x00000403 | Metering mode |
| 0x00000404 | AF mode (cap) |
| 0x00000405 | Aperture value (cap) at the time of shooting |
| 0x00000406 | Shutter speed setting value (cap) |
| 0x00000407 | Exposure compensation (cap) |
| 0x00000408 | Flash compensation setting |
| 0x00000409 | Lens focal length information at the time of shooting |
| 0x0000040a | Number of available shots |
| 0x0000040b | ISO, auto exposure or flash exposure bracket |
| 0x0000040c | White balance bracket |
| 0x0000040d | String representing the lens name |
| 0x0000040e | Auto exposure bracket value |
| 0x0000040f | Flash exposure bracket value |
| 0x00000410 | ISO bracket value |
| 0x00000411 | Noise reduction |
| 0x00000412 | Use of the flash (activated or not) |
| 0x00000413 | Red-eye reduction |
| 0x00000414 | Flash type |
| 0x00000416 | Lens state: attached or none |

■ Other

| Value | Description |
|------------|-------------|
| 0x0000FFFF | Unknown |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2 Property Details

Properties are explained in the following format.

5.3.xx PropertyID

The property ID.

Description

Explains the role of the property and how to work with it.

Target Object

Indicates the "target object" that the property describes and which is subject to operations involving the property.

Properties for which "Access Type" is [Read] can be read by means of objects subject to operations, such as remote cameras. Similarly, an access type of [Write] means the property can be set by means of operations on objects subject to operations.

"Data type number" indicates the enumeration name for data types that can be retrieved by means of **EdsGetPropertySize**.

"Data type" indicates the data type of property data that can be retrieved or set by means of an **EdsVoid** pointer, which is a dummy argument for **EdsGetPropertyData** or **EdsSetPropertyData**.

Value

Indicates possible values for the property.

Values are expressed as decimals unless otherwise noted.

Note

Considerations when using the property.

5.2.1 kEdsPropID_AtCapture_Flag

Description

A supporting property for getting the properties at the time of shooting.

This property ID cannot be used by itself.

Usually, the properties you can retrieve from objects are the current settings values. However, if the target object is **EdsImageRef**, when getting image properties, you can get some properties at the time of shooting by designating a property ID and an OR value for **kEdsPropID_AtCapture_Flag** in the arguments for **EdsGetPropertyData**.

The property types of values at the time of shooting that can be retrieved are as follows.

| Properties that can be retrieved for settings values at the time of shooting |
|--|
| kEdsPropID_DigitalExposure |
| kEdsPropID_WhiteBalance |
| kEdsPropID_ColorTemperature |
| kEdsPropID_WhiteBalanceShift |
| kEdsPropID_ClickWBPoint |
| kEdsPropID_WBCoeffs |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| |
|-----------------------------|
| kEdsPropID_Linear |
| kEdsPropID_ColorSpace |
| kEdsPropID_PictureStyle |
| kEdsPropID_PictureStyleDesc |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_UInt32 | EdsUInt32 |

Value

None

5.2.2 kEdsPropID_ProductName

Description

A string representing the product name.

If the target object is EdsCameraRef, this property indicates the name of the remote camera.

If the target object is EdsImageRef, this property indicates the name of the camera used to shoot the image.

Data Type

| Data type number | Data type |
|---------------------|-----------|
| kEdsDataType_String | EdsChar[] |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_String | EdsChar[] |
| EdsImageRef | | | |

Value

ASCII text strings up to 32 characters, including null-terminated strings.

5.2.3 kEdsPropID_BodyID

Description

Indicates the product serial number.

If the target object is EdsCameraRef, this property indicates the serial number of the remote camera.

If the target object is EdsImageRef, this property indicates the serial number of the camera used to shoot the image.

Data Type

| Data type number | Data type |
|---------------------|-----------|
| kEdsDataType_UInt32 | EdsUInt32 |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | | | |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Value

Integer values.

5.2.4 kEdsPropID_OwnerName

Description

Indicates a string identifying the owner as registered on the camera.

If the target object is EdsCameraRef, this property indicates the owner name for the remote camera.

If the target object is EdsImageRef, this property indicates the owner name for the camera used to shoot the image.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_String | EdsChar[] |
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

ASCII text strings up to 32 characters, including null-terminated strings.

5.2.5 kEdsPropID_Artist

Description

Indicates a string identifying the photographer as registered on the camera.

If the target object is EdsCameraRef, this property indicates the owner name for the remote camera.

If the target object is EdsImageRef, this property indicates the owner name for the camera used to shoot the image.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_String | EdsChar[] |
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

ASCII text strings up to 64 characters, including null-terminated strings.

5.2.6 kEdsPropID_Copyright

Description

Indicates a string identifying the copyright information as registered on the camera.

If the target object is EdsCameraRef, this property indicates the owner name for the remote camera.

If the target object is EdsImageRef, this property indicates the owner name for the camera used to shoot the image.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_String | EdsChar[] |
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

ASCII text strings up to 64 characters, including null-terminated strings.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2.7 kEdsPropID_MakerName

Description

Indicates a string identifying the manufacturer.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

ASCII strings, including null-terminated strings. For our purposes: "Canon".

5.2.8 kEdsPropID_DateTime

Description

Indicates the time and date set on the camera or the shooting date and time of images.

If the target object is EdsCameraRef, this property indicates the camera system time.

If the target object is EdsImageRef, this property indicates the time and date of shooting.

Target Object

| Target object | Access type |
|---------------|-------------|
| EdsCameraRef | Read |
| EdsImageRef | Read |

Value

The time and date as an EdsTime type; for Read or Write operations.

5.2.9 kEdsPropID_FirmwareVersion

Description

Indicates the camera's firmware version.

Data Type

| Data type number | Data type |
|---------------------|-----------|
| kEdsDataType_String | EdsChar[] |

Target Object

| Target object | Access type |
|---------------|-------------|
| EdsCameraRef | Read |
| EdsImageRef | Read |

Value

ASCII text strings up to 32 characters, including null-terminated strings.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2.10 kEdsPropID_BatteryLevel

Description

Indicates the camera battery level.

When the battery reaches a particular level, a kEdsPropertyEvent_PropertyChanged event is generated.

The battery level that triggers the event is model-dependent.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_UInt32 | EdsUInt32 |

Value

| Value | Description |
|------------|-------------------|
| 0–100 | Battery level (%) |
| 0xffffffff | AC power |

5.2.11 kEdsPropID_BatteryQuality

Description

Gets the level of degradation of the battery.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_UInt32 | EdsUInt32 |

Value

| Value | Description |
|---------------------------|--------------------|
| 3:kEdsBatteryQuality_Full | No degradation |
| 2:kEdsBatteryQuality_HI | Slight degradation |
| 1:kEdsBatteryQuality_Half | Degraded |
| 0:kEdsBatteryQuality_Low | Degraded |

5.2.12 kEdsPropID_FocusInfo

Description

Indicates focus information for image data at the time of shooting.

This property does not depend on the AF mode at the time of shooting. AF frames in focus are indicated by JustFocus, even during manual shooting.

The EOS 50D or EOS 5D Mark II or later cameras obtain the AF frame from EdsCameraRef. The value obtained during live view operations is different.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| Live View | AF Frame |
|----------------|---|
| When operating | The AF frame depending on the AF mode during live view set for the camera |
| When stopped | The AF frame during Quick Mode |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|------------------------|--------------|
| EdsCameraRef | Read | kEdsDataType_FocusInfo | EdsFocusInfo |
| EdsImageRef | Read | kEdsDataType_FocusInfo | EdsFocusInfo |

Value

| Element | Value |
|-------------|---|
| imageRect | The upper-left coordinates of the image, as well as the width and height |
| pointNumber | AF frame number |
| focusPoint | valid |
| | Invalid AF frame: 0 Valid AF frame: 1 Note: There are as many valid AF frames as the number in FrameNumber. Usually, AF frames are recorded consecutively, starting with 0. Note: AF frame coordinates and the array number for storage vary by model. |
| | Selected |
| | Selected AF Frame: 1 Unselected AF Frame: 0 |
| | justFocus |
| | In focus: 1 Out of focus: 0 |
| | rect |
| | Upper-left and lower-right coordinates of the AF frame |
| | reserved |
| | Reserved |

5.2.13 kEdsPropID_ICCProfile

Description

Indicates the ICC profile data embedded in an image.

An error is returned if you use EdsGetPropertyData to attempt to get the ICC profile of an image without an embedded ICC profile.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|------------------------|-----------|
| EdsImageRef | Read | kEdsDataType_ByteBlock | EdsInt8[] |

Value

Returns ICC profile data as ByteBlock data.

5.2.14 kEdsPropID_ImageQuality

Description

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Indicates the image quality.

If you designate EdsCameraRef as the target object, this property indicates the current image quality set on the camera.

If you designate an image as the target object, this property indicates the image quality that the image was shot with.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value

| Bit number | Description | Value |
|------------|---|--|
| 28-31 | reserved | |
| 24-27 | Image Size of the main image | Values defined in enum EdsImageSize |
| 20-23 | Image Format of the main image | Values defined in enum EdsImageFormat |
| 16-19 | Image Compress Quality of the main image | Values defined in enum EdsImageCompressQuality |
| 12-15 | reserved | |
| 8-11 | Image Size of the secondary image | Values defined in enum EdsImageSize |
| 4-7 | Image Format of the secondary image | Values defined in enum EdsImageFormat |
| 0-3 | Image Compress Quality of the secondary image | Values defined in enum EdsImageCompressQuality |

| ImageQuality | Value (PTP Camera) | Value (Legacy Camera) |

EdsImageType <defined location>EDSDKTypes.h

| Value | Description |
|-----------------------------|-------------------------------|
| kEdsTargetImageType_Unknown | Folder, or unknown image type |
| kEdsTargetImageType_Jpeg | JPEG |
| kEdsImageType_CRW | CRW |
| kEdsImageType_CR2 | CR2 |

EdsImageSize <defined location>EDSDKTypes.h

| Value | Description |
|------------|-------------|
| 0 | Large |
| 1 | Medium |
| 2 | Small |
| 5 | Medium 1 |
| 6 | Medium 2 |
| 0xFFFFFFFF | Unknown |

EdsCompressQuality <defined location>EDSDKTypes.h

| Value | Description |
|------------|-------------|
| 2 | Normal |
| 3 | Fine |
| 4 | Lossless |
| 5 | Superfine |
| 0xFFFFFFFF | Unknown |

Note

- Legacy cameras do not support GetPropertyDesc, but they can be set using an appropriate value.
- Small Raw1 and Small Raw2 are only EOS 50D and EOS 5D Mark II.

5.2.15 kEdsPropID_JpegQuality

Description

Indicates the JPEG compression.

In the inParam argument, designate Image Size as retrieved by means of the kEdsPropID_ImageQuality property. This property is valid for the EOS 1 series only.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | KEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read | | |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Value

An integer value of 0–10. (0 if uncompressed.)

5.2.16 kEdsPropID_Orientation

Description

Indicates image rotation information.

This property can be read or written, regardless of the image compression format (RAW, JPEG, and so on); the access type is Read/Write.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |

Value

| Value | Description | U: Up D: Down L: Left R: Right |
|-------|---|---|
| 1 | The 0th row is at the visual top of the image, and the 0th column is on the visual left-hand side | U L + R D |
| 3 | The 0th row is at the visual bottom of the image, and the 0th column is on the visual right-hand side | D R + L U |
| 6 | The 0th row is on the visual right-hand side of the image, and the 0th column is at the visual top | L D + U R |
| 8 | The 0th row is on the visual left-hand side of the image, and the 0th column is at the visual bottom | R U + D L |
| Other | Reserved | |

Note

Rotation information is retrieved from images' Exif information. Thus, images rotated by means of a software tool of computer may be displayed differently from how they would appear using the actual rotation information.

5.2.17 kEdsPropID_AEMode

Description

Indicates settings values of the camera in shooting mode.

You cannot set (that is, Write) this property on cameras with a mode dial.

If the target object is EdsCameraRef, you can use GetPropertyDesc to access this property and get a list of property values that can currently be set.

However, you cannot get a list of settable values from models featuring a dial. The GetPropertyDesc return value will be EDS_ERR_OK, and no items will be listed as values you can set.

The shooting mode is in either an applied or simple shooting zone. When a camera is in a shooting mode of the simple shooting zone, a variety of capture-related properties (such as for auto focus, drive mode, and metering

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

mode) are automatically set to the optimal values. Thus, when the camera is in a shooting mode of a simple shooting zone, capture-related properties cannot be set on the camera.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read/(Write) | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value

Values defined in Enum EdsAEMode.

Enum EdsAEMode

| Value | | Description |
|-------|-----------------------|---|
| 0 | Applied shooting zone | Program AE |
| 1 | | Shutter-Speed Priority AE |
| 2 | | Aperture Priority AE |
| 3 | | Manual Exposure |
| 4 | | Bulb Note: For some models, the value of the property cannot be retrieved as kEdsPropID_AEMode. In this case, Bulb is retrieved as the value of the shutter speed (kEdsPropID_Tv) property. Note: Bulb is designed so that it cannot be set on cameras from a computer by means of SetPropertyData. |
| 5 | | Auto Depth-of-Field AE |
| 6 | Simple shooting zone | Depth-of-Field AE |
| 7 | | Camera settings registered |
| 8 | | Lock |
| 9 | | Auto |
| 10 | | Night Scene Portrait |
| 11 | | Sports |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | |
|------------|--|--|
| 12 | | Portrait  |
| 13 | | Landscape  |
| 14 | | Close-Up  |
| 15 | | Flash Off  |
| 19 | | Creative Auto  |
| 21 | | Photo In Movie (This value is valid for only Image.) |
| 0xFFFFFFFF | | Not valid/no settings changes |

5.2.18 kEdsPropID_DriveMode

Description

Indicates settings values of the camera in drive mode.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Uint32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value

| Value | Description |
|------------|--|
| 0x00000000 | Single-Frame Shooting  |
| 0x00000001 | Continuous Shooting  |
| 0x00000002 | Video |
| 0x00000003 | Not used |
| 0x00000004 | High-Speed Continuous Shooting  |
| 0x00000005 | Low-Speed Continuous Shooting  |
| 0x00000006 | Silent single shooting |
| 0x00000007 | 10-Sec Self-Timer plus continuous shots  |
| 0x00000010 | 10-Sec Self-Timer  |
| 0x00000011 | 2-Sec Self-Timer |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Note

EOS-1D Mark III doesn't record "Silent single shooting" in the image file.

5.2.19 kEdsPropID_ISOSpeed

Description

Indicates ISO sensitivity settings values.

Caution is advised because it is possible to retrieve different values by means of EdsCameraRef and EdsImageRef.

If the target object is EdsCameraRef, you can use GetPropertyDesc to access this property and get a list of property values that can currently be set.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Uint32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value (EdsCameraRef)

| Value | Description |
|------------|-------------------------------|
| 0x00000028 | ISO 6 |
| 0x00000030 | ISO 12 |
| 0x00000038 | ISO 25 |
| 0x00000040 | ISO 50 |
| 0x00000048 | ISO 100 |
| 0x0000004b | ISO 125 |
| 0x0000004d | ISO 160 |
| 0x00000050 | ISO 200 |
| 0x00000053 | ISO 250 |
| 0x00000055 | ISO 320 |
| 0x00000058 | ISO 400 |
| 0x0000005b | ISO 500 |
| 0x0000005d | ISO 640 |
| 0x00000060 | ISO 800 |
| 0x00000063 | ISO 1000 |
| 0x00000065 | ISO 1250 |
| 0x00000068 | ISO 1600 |
| 0x00000070 | ISO 3200 |
| 0x00000078 | ISO 6400 |
| 0x00000080 | ISO 12800 |
| 0x00000088 | ISO 25600 |
| 0x00000090 | ISO 51200 |
| 0x00000098 | ISO 102400 |
| 0xffffffff | Not valid/no settings changes |

Value (EdsImageRef)

| Value | Description |
|-------|-------------|
| 50 | ISO 50 |
| 100 | ISO 100 |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|--------|------------|
| 200 | ISO 200 |
| 400 | ISO 400 |
| 800 | ISO 800 |
| 1600 | ISO 1600 |
| 3200 | ISO 3200 |
| 6400 | ISO 6400 |
| 12800 | ISO 12800 |
| 25600 | ISO 25600 |
| 51200 | ISO 51200 |
| 102400 | ISO 102400 |

The value you can retrieve from the image data, indicated by EdsImageRef, represents the ISO value itself.

5.2.20 kEdsPropID_MeteringMode

Description

Indicates the metering mode.

If the target object is EdsCameraRef, you can use GetPropertyDesc to access this property and get a list of property values that can currently be set.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Uint32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value

| Value | Description |
|------------|---|
| 1 | Spot metering  |
| 3 | Evaluative metering  |
| 4 | Partial metering  |
| 5 | Center-weighted averaging metering  |
| 0xFFFFFFFF | Not valid/no settings changes |

Note

For details on various metering modes, see the camera user's manual.

5.2.21 kEdsPropID_AFMode

Description

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Indicates AF mode settings values.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|----------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_ UInt32 | EdsUInt32 |
| EdsImageRef | | | |

Value

| Value | Description |
|------------|--------------------------------|
| 0 | One-Shot AF ONE SHOT |
| 1 | AI Servo AF AI SERVO |
| 2 | AI Focus AF AI FOCUS |
| 3 | Manual Focus |
| 0xffffffff | Not valid/no settings changes |

5.2.22 kEdsPropID_Av

Description

Indicates the camera's aperture value.

Caution is advised because EdsCameraRef and EdsImageRef yield different data types and values.

If the target object is EdsCameraRef, you can use GetPropertyDesc to access this property and get a list of property values that can currently be set.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|----------------------|-------------|
| EdsCameraRef | Read/Write | kEdsDataType_ UInt32 | EdsUInt32 |
| EdsImageRef | Read | kEdsType_ Rational | EdsRational |

Value (EdsCameraRef)

| Value | Aperture value |
|-------|----------------|
| 0x08 | 1 |
| 0x0B | 1.1 |
| 0x0C | 1.2 |
| 0x0D | 1.2 (1/3) |
| 0x10 | 1.4 |
| 0x13 | 1.6 |

| 0x6D | 80 |
| 0x70 | 91 |
| 0xffffffff | Not valid/no settings changes |
| | |
| | |

Note: Values labeled "(1/3)" represent property values when the step set in the Custom Function is 1/3.

Value (EdsImageRef)

Returns the aperture value as an EdsRational type.

5.2.23 kEdsPropID_Tv

Description

Indicates the shutter speed.

Caution is advised because EdsCameraRef and EdsImageRef yield different values.

If the target object is EdsCameraRef, you can use GetPropertyDesc to access this property and get a list of property values that can currently be set.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-------------|
| EdsCameraRef | Read/Write | kEdsDataType_Uint32 | EdsUInt32 |
| EdsImageRef | Read | kEdsType_Rational | EdsRational |

Value (EdsCameraRef)

| Value | Shutter speed |
|-------|---------------|
| 0x0C | Bulb |
| 0x10 | 30" |
| 0x13 | 25" |
| 0x14 | 20" |
| 0x15 | 20" (1/3) |
| 0x18 | 15" |
| 0x1B | 13" |

| 0x50 | 1/8 |
| 0x53 | 1/10 (1/3) |
| 0x54 | 1/10 |
| 0x55 | 1/13 |
| 0x58 | 1/15 |
| 0x5B | 1/20 (1/3) |
| 0x5C | 1/20 |

| | |
|------------|-------------------------------|
| 0x75 | 1/200 |
| 0x78 | 1/250 |
| 0x7B | 1/320 |
| 0x7C | 1/350 |
| 0x7D | 1/400 |
| 0x80 | 1/500 |
| 0x83 | 1/640 |
| 0x84 | 1/750 |
| 0x85 | 1/800 |
| 0x88 | 1/1000 |
| 0x8B | 1/1250 |
| 0x8C | 1/1500 |
| 0x8D | 1/1600 |
| 0x90 | 1/2000 |
| 0x93 | 1/2500 |
| 0x94 | 1/3000 |
| 0x95 | 1/3200 |
| 0x98 | 1/4000 |
| 0x9B | 1/5000 |
| 0x9C | 1/6000 |
| 0x9D | 1/6400 |
| 0xA0 | 1/8000 |
| 0xffffffff | Not valid/no settings changes |
| | |
| | |
| | |
| | |
| | |

Note: Values labeled "(1/3)" represent property values when the step set in the Custom Function is 1/3.

Value (EdsImageRef)

Returns the shutter speed value as a kEdsType_Rational type.

Note

- Bulb is designed so that it cannot be set on cameras from a computer by means of SetPropertyData. (It cannot even be retrieved by means of GetPropertyDesc as a value that can be set.) This is because incorrect handling of Bulb would prevent shutter control from a computer.

5.2.24 kEdsPropID_ExposureCompensation

Description

Indicates the exposure compensation.

Exposure compensation refers to compensation relative to the position of the standard exposure mark (in the center of the exposure gauge).

Caution is advised because EdsCameraRef and EdsImageRef yield different values.

If the target object is EdsCameraRef, you can use GetPropertyDesc to access this property and get a list of property values that can currently be set.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-------------|
| EdsCameraRef | Read/Write | kEdsDataType_Uint32 | EdsUInt32 |
| EdsImageRef | Read | kEdsType_Rational | EdsRational |

Value (EdsCameraRef)

| Value | Exposure compensation |
|-------|-----------------------|
| 0x18 | +3 |
| 0x15 | +2 2/3 |
| 0x14 | +2 1/2 |
| 0x13 | +2 1/3 |
| 0x10 | +2 |
| 0x0D | +1 2/3 |
| 0x0C | +1 1/2 |
| 0x0B | +1 1/3 |
| 0x08 | +1 |
| 0x05 | +2/3 |
| 0x04 | +1/2 |
| 0x03 | +1/3 |
| 0x00 | 0 |

| Value | Exposure compensation |
|------------|-------------------------------|
| 0xFD | -1/3 |
| 0xFC | -1/2 |
| 0xFB | -2/3 |
| 0xF8 | -1 |
| 0xF5 | -1 1/3 |
| 0xF4 | -1 1/2 |
| 0xF3 | -1 2/3 |
| 0xF0 | -2 |
| 0xED | -2 1/3 |
| 0xEC | -2 1/2 |
| 0xEB | -2 2/3 |
| 0xE8 | -3 |
| 0xffffffff | Not valid/no settings changes |

Value (EdsImageRef)

Returns the exposure compensation as a kEdsType_Rational type.

Note

- Exposure compensation is not available if the camera is in manual exposure mode. Thus, the exposure compensation property is invalid.

5.2.25 kEdsPropID_DigitalExposure

Description

Indicates the digital exposure compensation.

As the digital exposure compensation, a value is returned representing the compensation for brightness. This is equivalent to the exposure at the time of shooting as adjusted for the aperture plus or minus several steps.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-------------------|-------------|
| EdsImageRef | Read/Write | kEdsType_Rational | EdsRational |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Returns the digital exposure compensation as a kEdsType_Rational type.

See Also

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- With this property, it is possible to get values at the time of shooting.

5.2.26 kEdsPropID_FlashCompensation

Description

Indicates the flash compensation.

Note that flash compensation cannot be retrieved for an external flash.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_Uint32 | EdsUInt32 |

Value

The flash compensation is the same value as the exposure compensation property

kEdsPropID_ExposureCompensation.

5.2.27 kEdsPropID_FocalLength

Description

Indicates the focal length of the lens.

When a single-focus lens is used, the same value is returned for the Wide and Tele focal length.

You can obtain three items of information at once by using EdsGetPropertyData to get this property: the focal length at the time of shooting, the focal length of Wide, and the focal length of Tele. In this case, the buffer storing this property data is passed in three parts. However, if you prefer to get only the focal length at the time of shooting, you can get only that single part of the buffer.

Example: To get only the focal length at the time of shooting

```
EdsRational ratVal ;
```

```
err = EdsGetPropertyData( ref, kEdsPropID_FocalLength, 0, sizeof( EdsRational ), &ratVal ) ;
```

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------------|---------------|
| EdsImageRef | Read | kEdsDataType_Rational_Array | EdsRational[] |

Value

| Array number | Description | Value |
|--------------|--------------------------------------|--------------------|
| 0 | Focal length at the time of shooting | Focal length value |
| 1 | Wide focal length | |
| 2 | Tele focal length | |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2.28 kEdsPropID_AvailableShots

Description

Indicates the number of shots available on a camera.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_Uint32 | EdsUInt32 |

Value

Integer values.

Note

- Remote type 2 protocol standard cameras return the number of shots left on the camera based on the available disk capacity of the host computer they are connected to.

5.2.29 kEdsPropID_Bracket

Description

Indicates the current bracket type.

If multiple brackets have been set on the camera, you can get the bracket type as a logical sum.

This property cannot be used to get bracket compensation. Compensation is collected separately because there are separate properties for each bracket type.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_Uint32 | EdsUInt32 |
| EdsImageRef | | | |

Value

Values defined in Enum EdsBracket.

Enum EdsBracket <defined location>EDSDKType.h

| Value | Description |
|------------|-------------|
| 0x01 | AE bracket |
| 0x02 | ISO bracket |
| 0x04 | WB bracket |
| 0x08 | FE bracket |
| 0xFFFFFFFF | Bracket off |

5.2.30 kEdsPropID_AEBracket

Description

Indicates the AE bracket compensation of image data.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------|-------------|
| EdsImageRef | Read | kEdsDataType_Rational | EdsRational |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Value

Returns the AE bracket compensation. For details on the compensation range and number of steps, see the camera user's manual.

5.2.31 kEdsPropID_FEBracket

Description

Indicates the FE bracket compensation at the time of shooting of image data.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------|-------------|
| EdsImageRef | Read | kEdsDataType_Rational | EdsRational |

Value

Returns the FE bracket compensation. For details on the compensation range and number of steps, see the camera user's manual.

5.2.32 kEdsPropID_ISOBracket

Description

Indicates the ISO bracket compensation at the time of shooting of image data.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------|-------------|
| EdsImageRef | Read | kEdsDataType_Rational | EdsRational |

Value

Returns the ISO bracket compensation. For details on the compensation range and number of steps, see the camera user's manual.

5.2.33 kEdsPropID_WhiteBalanceBracket

Description

Indicates the white balance bracket amount.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------------|------------|
| EdsCameraRef | Read | kEdsDataType_Int32_Array | EdsInt32[] |
| EdsImageRef | | | |

Value(EdsCameraRef)

| Array number | Description | Value |
|--------------|-------------|---------------------------------------|
| 0 | BracketMode | 0 = OFF 1 = Mode AB 2 = Mode GM |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | |
|---|--|----------------------------|
| | | 0xFFFFFFFF = Not Supported |
| 1 | BracketValueAB The bracket amount from the WhiteBalanceShift position toward AB | 0 to +9 |
| 2 | BracketValueGM The bracket amount from the WhiteBalanceShift position toward GM | 0 to +9 |

Note: "AB" means the bracket toward amber-blue and "GM" toward green-magenta.

Note

- Under the camera specifications, AB and GM modes cannot be set at the same time.
- Depending on the model, it may not be possible to get an accurate value.
For example, no value is specified in BracketMode for the EOS Kiss Digital N/350D/REBEL XT, and 3 is specified in BracketValueAB regardless of the bracket amount. (It can be known that the camera's WB bracket has been set.)

Value (EdsImageRef)

| Array number | Description | Value |
|--------------|--|---|
| 0 | BracketMode | 0 = OFF 1 = Mode AB 2 = Mode GM 0xFFFFFFFF = Not Supported |
| 1 | BracketValueAB The bracket amount from the WhiteBalanceShift position toward AB | −9 to +9 (B direction−A direction) |
| 2 | BracketValueGM The bracket amount from the WhiteBalanceShift position toward GM | −9 to +9 (G direction−M direction) |

5.2.34 kEdsPropID_WhiteBalance

Description

Indicates the white balance type.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Int32 | EdsInt32 |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Values defined in Enum EdsWhiteBalance.

Enum EdsWhiteBalance <defined location>EDSDKType.h

| Value | Description |
|-------|---|
| 0 | Auto  |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|

| 21 | Custom white balance: PC-5 |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|----|---|
| | PC5 |
| -1 | Setting the white balance by clicking image coordinates |
| -2 | White balance copied from another image |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- If the white balance type is "Color Temperature," to know the actual color temperature you must reference another property (kEdsPropID_ColorTemperature).
- With this property, it is possible to get values at the time of shooting.

5.2.35 kEdsPropID_ColorTemperature

Description

Indicates the color temperature setting value. (Units: Kelvin)

Valid only when the white balance is set to Color Temperature.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

2800–10000, in 100-Kelvin increments.

5200 represents a color temperature of 5200 K.

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- To know if the white balance is set to color temperature, refer to another property (kEdsPropID_WhiteBalance).
- With this property, it is possible to get values at the time of shooting.

5.2.36 kEdsPropID_WhiteBalanceShift

Description

Indicates the white balance compensation.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------------|------------|
| EdsCameraRef | Read/Write | kEdsDataType_Int32_Array | EdsInt32[] |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Value

| Array number | Description | Value |
|--------------|-------------|--|
| 0 | ValueAB | -9 to +9 0x7FFFFFFF = invalid value Note: 0 means no compensation, (-) means compensation toward blue, and (+) means compensation toward amber. |
| 1 | ValueGM | -9 to +9 0x7FFFFFFF = invalid value Note: 0 means no compensation, (-) means compensation toward green, and (+) means compensation toward magenta. |

Note: "AB" means compensation toward amber-blue and "GM" toward green-magenta.

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- With this property, it is possible to get values at the time of shooting.

5.2.37 kEdsPropID_ClickWBPoint

Description

Indicates the coordinates when an image is clicked to set the white balance.

Only writing is valid.

If you designate coordinates for this property, the white balance value for those coordinates is incorporated in the property kEdsPropID_WBCoeffs.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsImageRef | Write | kEdsDataType_Point | EdsPoint |

Value

Designate coordinates within the range of the target image.

Note

- With this property, it is possible to get values at the time of shooting.

5.2.38 kEdsPropID_WBCoeffs

Description

Indicates the white balance value.

You can apply this value to other image properties, to process images under the same white balance.

Target Object

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| Target object | Access type | Data type number | Data type |
|---------------|-------------|------------------------|-----------|
| EdsImageRef | Read/Write | kEdsDataType_ByteBlock | EdsInt8[] |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Coefficients to maintain a specific white balance. Use unmodified data from a source image with a white balance you want to copy.

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- With this property, it is possible to get values at the time of shooting.

5.2.39 kEdsPropID_Linear

Description

Indicates if linear processing is activated or not.

This property is valid only if 16-bit TIFF or 16-bit RGB has been set for image processing.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-------------------|-----------|
| EdsImageRef | Read/Write | kEdsDataType_Bool | EdsBool |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

TRUE: Linear processing
FALSE: Not linear processing

Note

- With this property, it is possible to get values at the time of shooting.

5.2.40 kEdsPropID_Sharpness

Description

Indicates the sharpness setting.

If the target object is EdsCameraRef and you designate the processing parameter set (refer to the kEdsPropID_ParameterSet value) in inParam, this property corresponds to the sharpness setting value of that processing parameter set. By using inParam = 0, you can designate the current sharpness.

Target Object

| Target object | Access type | Data type number | Data type |
|------------------------------------|-------------|--------------------------|------------|
| EdsCameraRef | Read/Write | kEdsDataType_Int32 | EdsInt32 |
| EdsImageRef (Other than 1D/1Ds) | Read | | |
| EdsImageRef (1D/1Ds) | Read | kEdsDataType_Int32_Array | EdsInt32[] |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Value (EdsCameraRef and EdsImageRef for models other than 1D and 1Ds)

| Value | Description |
|------------|-----------------------------------|
| 0 to 5 | 1 series models |
| –2 to 2 | 20D, Kiss Digital N/350D/REBEL XT |
| 0x7FFFFFFF | Unknown |

Value (EdsImageRef, 1D and 1Ds)

| Array number | Description | Value |
|--------------|----------------------|--|
| 0 | Sharpness | 0: Invalid 1 2 3 4 5 Weaker <—————> Stronger |
| 1 | Applicable sharpness | 0 1 2 3 4 5 Rough <—————> Fine |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- This property cannot be retrieved or set from EdsCameraRef for the EOS 20D or EOS Kiss Digital N/350D/REBEL XT.
- This property is invalid for models supporting picture styles. For models supporting picture styles, use the property kEdsPropID_PictureStyleDesc.
- With this property, it is possible to get values at the time of shooting.

5.2.41 kEdsPropID_ParameterSet
Description

Indicates the current processing parameter set on a camera.
Only valid for the EOS 1D Mark II and EOS 1Ds Mark II.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |

Value

| Value | Description |
|-------|------------------------|
| 0 | Standard (Read only) |
| 1 | Processing parameter 1 |
| 2 | Processing parameter 2 |
| 3 | Processing parameter 3 |

5.2.42 kEdsPropID_ColorSaturation
Description

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Indicates the saturation.

If the target object is EdsCameraRef and you designate ColorMatrix in inParam, this property corresponds to the saturation setting value of ColorMatrix. By using inParam = 0, you can designate the current saturation value.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Int32 | EdsInt32 |
| EdsImageRef | Read | | |

Value

| Value | Description |
|------------|---|
| -2 to 2 | For the 20D, Kiss Digital N/350D/REBEL XT, 1D Mark II, or 1Ds Mark II |
| 0xFFFFFFFF | Unknown |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- This property cannot be retrieved or set from EdsCameraRef for the 20D or Kiss Digital N/350D/REBEL XT.
- This property is invalid for models supporting picture styles. For models supporting picture styles, use the property kEdsPropID_PictureStyleDesc.
- With this property, it is possible to get values at the time of shooting.

5.2.43 kEdsPropID_ColorMatrix

Description

Indicates the color matrix.

Only valid for the EOS 1D Mark II and EOS 1Ds Mark II.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Values defined in Enum EdsColorMatrix.

Enum EdsColorMatrix <defined location>EDSDKTypes.h

| Value | Description |
|-------|--------------|
| 1 | ColorMatrix1 |
| 2 | ColorMatrix2 |
| 3 | ColorMatrix3 |
| 4 | ColorMatrix4 |
| 5 | ColorMatrix5 |
| 6 | ColorMatrix6 |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|------------|--|
| 7 | ColorMatrix7 |
| 0x7FFFFFFF | Unknown Note: "Unknown" also applies for a color matrix customized on a computer and set on the camera. |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- With this property, it is possible to get values at the time of shooting.

5.2.44 kEdsPropID_Contrast

Description

Indicates the contrast.

If the target object is EdsCameraRef and you designate the processing parameter set in inParam, this property corresponds to that setting value. By using inParam = 0, you can designate the current contrast value.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Int32 | EdsInt32 |
| EdsImageRef | Read | | |

Value

| Value | Description |
|------------|--|
| -2 to 2 | 20D, Kiss Digital N/350D/REBEL XT, 1D Mark II, 1Ds Mark II |
| 0x7FFFFFFF | Unknown |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- This property cannot be retrieved or set from EdsCameraRef for the 20D or Kiss Digital N/350D/REBEL XT.
- This property is invalid for models supporting picture styles. For models supporting picture styles, use the property kEdsPropID_PictureStyleDesc.
- With this property, it is possible to get values at the time of shooting.

5.2.45 kEdsPropID_ColorTone

Description

Indicates the color tone.

If the target object is EdsCameraRef and you designate ColorMatrix in inParam, this property corresponds to the color tone setting value of ColorMatrix. Similarly, if you designate the processing parameter in inParam, it indicates the color tone setting value of the item you designated. By using inParam = 0, you can designate the current color tone.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_Int32 | EdsInt32 |
| EdsImageRef | Read | | |

Value

| Value | Description |
|------------|--|
| -2 to 2 | 20D, Kiss Digital N/350D/REBEL XT, 1D Mark II, 1Ds Mark II |
| 0xffffffff | Unknown |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- This property cannot be retrieved or set from EdsCameraRef for the 20D or Kiss Digital N/350D/REBEL XT.
- This property is invalid for models supporting picture styles. For models supporting picture styles, use the property kEdsPropID_PictureStyleDesc.
- With this property, it is possible to get values at the time of shooting.

5.2.46 kEdsPropID_ColorSpace

Description

Indicates the color space.

If the target object is EdsCameraRef and you designate ColorMatrix in inParam, this property corresponds to the color space setting value of ColorMatrix. Similarly, if you designate the processing parameter in inParam, it indicates that setting value. By using inParam = 0, you can designate the current color space.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Values of Enum EdsColorSpace.

Enum EdsColorSpace <defined location>EDSDKTypes.h

| Value | Description |
|------------|-------------|
| 1 | sRGB |
| 2 | Adobe RGB |
| 0xffffffff | Unknown |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Note

- With this property, it is possible to get values at the time of shooting.

5.2.47 kEdsPropID_PhotoEffect

Description

Indicates the photo effect.

This property is valid only for the 20D and Kiss Digital N/350D/REBEL XT.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_UInt32 | EdsUInt32 |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Values defined in Enum EdsPhotoEffect.

Enum EdsPhotoEffect <defined location>EDSDKTypes.h

| Value | Description |
|-------|--|
| 0 | Off (Color Effect deactivated. Normal shooting.) |
| 5 | Black and white |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- With this property, it is possible to get values at the time of shooting.

5.2.48 kEdsPropID_FilterEffect

Description

Indicates the monochrome filter effect.

The supported models are the Kiss Digital N/350D/REBEL XT and 20D only.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value

Values defined in Enum EdsFilterEffect.

Enum EdsFilterEffect <defined location>EDSDKTypes.h

| Value | Description |
|-------|-------------|
| 0 | None |
| 1 | Yellow |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|---|--------|
| 2 | Orange |
| 3 | Red |
| 4 | Green |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- This property is invalid for models supporting picture styles. For models supporting picture styles, use the property kEdsPropID_PictureStyleDesc.
- With this property, it is possible to get values at the time of shooting.

5.2.49 kEdsPropID_ToningEffect

Description

Indicates the monochrome tone.

The supported models are the Kiss Digital N/350D/REBEL XT and 20D only.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value

| Value | Description |
|------------|-------------|
| 0 | None |
| 1 | Sepia |
| 2 | Blue |
| 3 | Violet |
| 4 | Green |
| 0xffffffff | Unknown |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- This property is invalid for models supporting picture styles. For models supporting picture styles, use the property kEdsPropID_PictureStyleDesc.
- With this property, it is possible to get values at the time of shooting.

5.2.50 kEdsPropID_ToneCurve

Description

Indicates the tone curve.

If the target object is EdsCameraRef, designate the following values in inParam.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| Value of inParam | Description |
|------------------|-------------|
| 0 | Standard |
| 1 | Set 1 |
| 2 | Set 2 |
| 3 | Set 3 |

Note: If the target object is EdsImageRef, designate 0 in inParam.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read | | |

Value (EdsCameraRef)

| Value | Description |
|-------|----------------|
| 0 | Default |
| 1 | User-Defined 1 |
| 2 | User-Defined 2 |
| 3 | User-Defined 3 |

Value (EdsImage)

| Value | Description |
|------------|----------------|
| 0x00000000 | Standard |
| 0x00000011 | User setting |
| 0x00000080 | Custom setting |
| 0x00000001 | TCD1 |
| 0x00000002 | TCD2 |
| 0x00000003 | TCD3 |

5.2.51 kEdsPropID_PictureStyle

Description

Indicates the picture style.

This property is valid only for models supporting picture styles (the EOS 5D or EOS 1D Mark II N or later).

To get or set the picture style registered in "User Setting," designate user setting 1– (kEdsPictureStyle_User1–) in inParam. By using inParam = 0, you can designate the current picture style.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

Values defined in Enum EdsPictureStyle.

However, kEdsPictureStyle_UserX in Enum EdsPictureStyle is not used here.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Enum EdsPictureStyle <defined location>EDSDKTypes.h

| Value | Picture style |
|--------|--|
| 0x0081 | Standard |
| 0x0082 | Portrait |
| 0x0083 | Landscape |
| 0x0084 | Neutral |
| 0x0085 | Faithful |
| 0x0086 | Monochrome |
| 0x0041 | Computer Setting 1 (base picture style only) |
| 0x0042 | Computer Setting 2 (base picture style only) |
| 0x0043 | Computer Setting 3 (base picture style only) |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- Computer settings (1 and so on) refers to data that was set by designating a picture style file to upload to the camera from a host computer. Computer setting data is registered in the corresponding user setting. (For example, computer setting 1 corresponds to user setting 1). As a user setting, it represents a picture style that users can select.
- Picture styles registered in computer settings always have a base picture style. As for picture styles other than presets, only base picture styles can be retrieved by means of this property value.
- With this property, it is possible to get values at the time of shooting.

5.2.52 kEdsPropID_PictureStyleDesc

Description

Indicates settings for each picture style.

This property is valid only for models supporting picture styles (the EOS 5D or EOS 1D Mark II N or later).

With **EdsGetPropertyData** or **EdsSetPropertyData**, you can designate a picture style in inParam to set that picture style setting item. By using inParam = 0, you can designate the current picture style.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-------------------------------|---------------------|
| EdsCameraRef | Read/Write | kEdsDataType_PictureStyleDesc | EdsPictureStyleDesc |
| EdsImageRef | Read/Write | | |

Note: Write is available as the access type with EdsImageRef only for RAW images.

Value

| Value | Picture style |
|-------------------------|--------------------------|
| An integer from -4 to 4 | Contrast |
| An integer from 0 to 7 | Sharpness |
| An integer from -4 to 4 | Saturation |
| An integer from -4 to 4 | Color tone |
| 0: None | Monochrome filter effect |
| 1: Yellow | |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|---------------------|-----------------|
| 2: Orange | |
| 3: Red | |
| 4: Green | |
| 0xFFFFFFFF: Unknown | |
| 0: None | Monochrome tone |
| 1: Sepia | |
| 2: Blue | |
| 3: Violet | |
| 4: Green | |
| 0xFFFFFFFF: Unknown | |

See Also

- Regarding RAW support for each camera model, to determine if a property is valid during processing, see [Support Status for RAW Properties](#).

Note

- Write is available as the access type with EdsImageRef objects only for RAW images. Processed images are read-only.
- With this property, it is possible to get values at the time of shooting.

5.2.53 kEdsPropID_FlashOn

Description

Indicates if the flash was on at the time of shooting.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_Uint32 | EdsUInt32 |

Value

| Value | Description |
|-------|-------------|
| 0 | No flash |
| 1 | Flash |

5.2.54 kEdsPropID_FlashMode

Description

Indicates the flash type at the time of shooting.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------------|-------------|
| EdsImageRef | Read | kEdsDataType_Uint32_Array | EdsUInt32[] |

Value

| Array number | Description | Value |
|--------------|-------------|--|
| 0 | Flash type | 0 = None (the "flash type" item itself is not displayed) 1 = Internal 2 = external E-TTL |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | |
|---|---------------|--|
| | | 3 = external A-TTL 0xFFFFFFFF = Invalid value |
| 1 | Syncro timing | 0 = 1st Curtain Syncro 1 = 2nd Curtain Syncro 0xFFFFFFFF = Invalid value |
| | | |

5.2.55 kEdsPropID_RedEye

Description

Indicates red-eye reduction.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|----------------------|-----------|
| EdsImageRef | Read | kEdsDataType_ UInt32 | EdsUInt32 |

Value

| Value | Description |
|------------|---------------|
| 0 | Off |
| 1 | On |
| 0xFFFFFFFF | Invalid value |

5.2.56 kEdsPropID_NoiseReduction

Description

Indicates noise reduction.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|----------------------|-----------|
| EdsImageRef | Read | kEdsDataType_ UInt32 | EdsUInt32 |

Value

| Value | Description |
|-------|-------------|
| 0 | Off |
| 1 | On 1 |
| 2 | On 2 |
| 3 | On |
| 4 | Auto |

Note

- Values 1–3 vary depending on the camera model.

5.2.57 kEdsPropID_PictureStyleCaption

Description

Returns the user-specified picture style caption name at the time of shooting.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

This property is valid only for models supporting picture styles (the EOS 5D or EOS 1D Mark II N or later). User-specified picture styles refer to picture styles for which picture style files are read on a host computer and set on a camera.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

ASCII text strings up to 32 characters, including null-terminated strings.

5.2.58 kEdsPropID_SaveTo

Description

Indicates the destination of images after shooting.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read/Write | kEdsDataType_UInt32 | EdsUInt32 |

Value

Values defined in Enum EdsSaveTo.

Enum EdsSaveTo <defined location>EDSDKTypes.h

| Value | Description |
|-------|--|
| 1 | Save on a memory card of a remote camera |
| 2 | Save by downloading to a host computer |
| 3 | Save both ways |

Note

- If kEdsSaveTo_Host or kEdsSaveTo_Both is used, the camera caches the image data to be transferred until DownloadComplete or CancelDownload APIs are executed on the host computer (by an application). The application creates a callback function to receive camera events. If kEdsObjectEvent_DirItemRequestTransfer or kEdsObjectEvent_DirItemRequestTransferDT events are received, the application must execute DownloadComplete (after downloading) or CancelDownload (if images are not needed) for the camera.

5.2.59 kEdsPropID_LensStatus

Description

Returns the camera state of whether the lens attached to the camera.

This property can only be retrieved from images shot using models the EOS 50D or EOS 5D Mark II or later.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|------------------|-----------|
| EdsCameraRef | Read | kEds_EdsUInt32 | EdsUInt32 |

Value

Returns the lens name as an EdsUInt32 value.

| Value | Description |
|-------|-------------|
|-------|-------------|

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | |
|---|---------------------------|
| 0 | The lens is not attached. |
| 1 | The lens is attached |

5.2.60 kEdsPropID_LensName

Description

Returns the lens name at the time of shooting.

This property can only be retrieved from images shot using models supporting picture styles (the EOS 5D or EOS1D Mark II N or later).

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

Returns the lens name as an ASCII string.

5.2.61 kEdsPropID_CurrentStorage

Description

Gets the current storage media for the camera.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_String | EdsChar[] |

Value

Current media name ("CF","SD","HDD")

5.2.62 kEdsPropID_CurrentFolder

Description

Gets the current folder for the camera.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsCameraRef | Read | kEdsDataType_String | EdsChar[] |

Value

Current folder name

5.2.63 kEdsPropID_HDDirectoryStructure

Description

Gets the directory structure information for USB storage.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

You can get the directory name currently targeted by specifying 0 in inParam. You can get specifiable directory names by specifying a value of 1 or higher in inParam. You can change the USB storage directory by specifying 0 for inParam and setting a specifiable directory name.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_String | EdsChar[] |

Value

USB storage directory name

5.2.64 kEdsPropID_Evf_OutputDevice

Description

Starts/ends live view.

The camera TFT and PC to be used as the output device for live view can be specified.

If a PC only is set for the output device, UI Lock status will be set for the camera except for the SET button.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_Uint32 | EdsUInt32 |

Value

| Value | Description |
|-----------------------------|--|
| 1 : KEdsEvfOutputDevice_TFT | Live view is displayed on the camera's TFT |
| 2 : KEdsEvfOutputDevice_PC | The live view image can be transferred to the PC |

5.2.65 kEdsPropID_Evf_Mode

Description

Gets/sets live view function settings.

This setting must be enabled to start live view when using the EOS-1D Mark III.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_Uint32 | EdsUInt32 |

Value

| Value | Description |
|-------|-------------|
| 0 | Disable |
| 1 | Enable |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2.66 kEdsPropID_Evf_WhiteBalance

Description

Gets/sets the white balance of the live view image.

The white balance for the live view image can be set separately from that for the image being shot.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_Uint32 | EdsUInt32 |

Value

This is the same as kEdsPropID_WhiteBalance.

5.2.67 kEdsPropID_Evf_ColorTemperature

Description

Gets/sets the color temperature of the live view image.

Just as with the white balance setting for the live view image, the color temperature for the live view image can also be set separately from that for the image being shot.

This is applied to the image only when the live view white balance is set to Color temperature.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_Uint32 | EdsUInt32 |

Value

This is the same as kEdsPropID_ColorTemperature.

5.2.68 kEdsPropID_Evf_DepthOfFieldPreview

Description

Turns the depth of field ON/OFF during Preview mode.

If kEdsEvfOutputDevice is set to KEdsEvfOutputDevice_PC and depth of field is being used, the camera will be put in UI Lock status.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_Uint32 | EdsUInt32 |

Value

| Value | Description |
|-------|-------------|
| 0 | OFF |
| 1 | ON |

5.2.69 kEdsPropID_Evf_Zoom

Description

Gets/sets the zoom ratio for the live view.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

The zoom ratio is set using EdsCameraRef, but obtained using live view image data, in other words, by using EdsEvfImageRef.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|---------------------|-----------|
| EdsCameraRef | Write | kEdsDataType_UInt32 | EdsUInt32 |
| EdsEvfImageRef | Read | kEdsDataType_UInt32 | EdsUInt32 |

Value

| Value | Description |
|----------------------|---------------|
| 1 : kEdsEvfZoom_Fit | Entire screen |
| 5 : kEdsEvfZoom_x5 | 5 times |
| 10 : kEdsEvfZoom_x10 | 10 times |

5.2.70 kEdsPropID_Evf_ZoomPosition

Description

Gets/sets the focus and zoom border position for live view.

The focus and zoom border is set using EdsCameraRef, but obtained using live view image data, in other words, by using EdsEvfImageRef.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|--------------------|-----------|
| EdsCameraRef | Write | kEdsDataType_Point | EdsPoint |
| EdsEvfImageRef | Read | kEdsDataType_Point | EdsPoint |

Value

The coordinates are the upper left coordinates of the focus and zoom border. These values expressed in a coordinate system of kEdsPropID_Evf_CoordinateSystem.

Note

The size of the focus and zoom border is one fifth the size of kEdsPropID_Evf_CoordinateSystem when 5x zoom or the entire screen is used, and one tenth the size of kEdsPropID_Evf_CoordinateSystem when 10x zoom is used.

The coordinate set through this property will be rounded to the nearest amount that is available in the camera.

5.2.71 kEdsPropID_Evf_ZoomRect

Description

Gets the focus and zoom border rectangle for live view.

The focus and zoom border is obtained using EdsEvfImageRef.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|--------------------|-----------|
| EdsEvfImageRef | Read | kEdsDataType_Point | EdsRect |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Value

The “point” member is the upper left coordinates of the focus and zoom border. And the “size” member is the rectangle of focus border size. These values expressed in a coordinate system of kEdsPropID_Evf_CoordinateSystem.

5.2.72 kEdsPropID_Evf_ImagePosition

Description

Gets the cropping position of the enlarged live view image.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|--------------------|-----------|
| EdsEvfImageRef | Read | kEdsDataType_Point | EdsPoint |

Value

The coordinates used are the upper left coordinates of the enlarged image. These values expressed in a coordinate system of kEdsPropID_Evf_CoordinateSystem.

5.2.73 kEdsPropID_Evf_CoordinateSystem

Description

Get the coordinate system of the live view image.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|--------------------|-----------|
| EdsEvfImageRef | Read | kEdsDataType_Point | EdsSize |

Value

The coordinate system is used to express each value of the live view image.

See Also

kEdsPropID_Evf_ZoomPosition
kEdsPropID_Evf_ZoomRect
kEdsPropID_Evf_ImagePosition

5.2.74 kEdsPropID_Evf_Histogram

Description

Gets the histogram for live view image data.
The histogram can be used to obtain YRGB.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|------------------------|-------------|
| EdsEvfImageRef | Read | kEdsDataType_ByteBlock | EdsUInt32[] |

Value

The histogram stores data in the form Y(0)R(0)G(0)B(0)Y(1)R(1)G(1)B(1)...Y(n)R(n)G(n)B(n)..... (0<=n<=255).
Cumulative values in the histogram differ from the total number of pixels in the image data.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2.75 kEdsPropID_Evf_HistogramStatus

Description

Gets the display status of the histogram.

The display status of the histogram varies depending on settings such as whether live view exposure simulation is ON/OFF, whether strobe shooting is used, whether bulb shooting is used, etc.

Target Object

| Target object | Access type | Data type number | Data type |
|----------------|-------------|---------------------|-----------|
| EdsEvfImageRef | Read | kEdsDataType_Uint32 | EdsUInt32 |

Value

| Value | Description |
|------------------------------------|-----------------------|
| 0 : kEdsEvfHistogramStatus_Hide | Hide the histogram |
| 1 : kEdsEvfHistogramStatus_Normal | Display the histogram |
| 2 : kEdsEvfHistogramStatus_Grayout | Grayout the histogram |

5.2.76 kEdsPropID_Evf_AFMode

Description

Set/Get the AF mode for the live view.

This property can set/get from the EOS 50D or EOS 5D Mark II or later.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|--------------|---------------------|-----------|
| EdsCameraRef | Read / Write | kEdsDataType_Uint32 | EdsUInt32 |

Value

| Value | Description |
|-------------------------|----------------|
| 0 : Evf_AFMode_Quick | Quick Mode |
| 1 : Evf_AFMode_Live | Live Mode |
| 2 : Evf_AFMode_LiveFace | Live Face Mode |

5.2.77 kEdsPropID_GPSVersionID

Description

Indicates the version of GPSInfoIFD. The version is given as 2.2.0.0.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsImageRef | Read | kEdsDataType_Uint8 | EdsUInt8 |

Value

Default = 2.2.0.0

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.2.78 kEdsPropID_GPSLatitudeRef

Description

Indicates whether the latitude is north or south latitude. The value 'N' indicates north latitude, and 'S' is south latitude.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

| Value | Description |
|-------|----------------|
| 'N' | North latitude |
| 'S' | South latitude |

5.2.79 kEdsPropID_GPSLatitude

Description

Indicates the latitude. The latitude is expressed as three RATIONAL values giving the degrees, minutes, and seconds, respectively.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------------|---------------|
| EdsImageRef | Read | kEdsDataType_Rational_Array | EdsRational[] |

5.2.80 kEdsPropID_GPSLongitudeRef

Description

Indicates whether the longitude is east or west longitude. 'E' indicates east longitude, and 'W' is west longitude.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

Value

| Value | Description |
|-------|----------------|
| 'E' | East longitude |
| 'W' | West longitude |

5.2.81 kEdsPropID_GPSLongitude

Description

Indicates the longitude. The longitude is expressed as three RATIONAL values giving the degrees, minutes, and seconds, respectively.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------------|---------------|
| EdsImageRef | Read | kEdsDataType_Rational_Array | EdsRational[] |

5.2.82 kEdsPropID_GPSAltitudeRef

Description

Indicates the altitude used as the reference altitude. If the reference is sea level and the altitude is above sea level, 0 is given. If the altitude is below sea level, a value of 1 is given and the altitude is indicated as an absolute value in the GPSAltitude. The reference unit is meters.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|--------------------|-----------|
| EdsImageRef | Read | kEdsDataType_UInt8 | EdsUInt8 |

Value

| Value | Description |
|-------|--------------------------------------|
| 0 | Sea level |
| 1 | Sea level reference (negative value) |

5.2.83 kEdsPropID_GPSAltitude

Description

Indicates the altitude based on the reference in GPSAltitudeRef. Altitude is expressed as one RATIONAL value. The reference unit is meters.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------|-------------|
| EdsImageRef | Read | kEdsDataType_Rational | EdsRational |

5.2.84 kEdsPropID_GPSTimeStamp

Description

Indicates the time as UTC (Coordinated Universal Time). TimeStamp is expressed as three RATIONAL values giving the hour, minute, and second.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|-----------------------------|---------------|
| EdsImageRef | Read | kEdsDataType_Rational_Array | EdsRational[] |

5.2.85 kEdsPropID_GPSSatellites

Description

Indicates the GPS satellites used for measurements.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

5.2.86 kEdsPropID_GPSMapDatum

Description

Indicates the geodetic survey data used by the GPS receiver.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_String | EdsChar[] |

5.2.87 kEdsPropID_GPSDateStamp

Description

A character string recording date and time information relative to UTC (Coordinated Universal Time). The format is "YYYY:MM:DD." The length of the string is 11 bytes including NULL.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_Strnig | EdsChar[] |

5.2.88 kEdsPropID_GPSStatus

Description

Indicates the status of the GPS receiver when the image is recorded. 'A' means measurement is in progress, and 'V' means the measurement is Interoperability.

Target Object

| Target object | Access type | Data type number | Data type |
|---------------|-------------|---------------------|-----------|
| EdsImageRef | Read | kEdsDataType_Strnig | EdsChar[] |

Value

| Value | Description |
|-------|---------------------------------|
| 'A' | Measurement is in progress |
| 'V' | Measurement is Interoperability |

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

5.3 Support Status for RAW Properties

Support status by model is as follows regarding processing system properties of image objects.

Of the properties listed here, kEdsPropID_ClickWBPoint supports writing only. **As for other processing system properties, those indicated by ○ can all be read or written.**

| Property ID | Model | | | | | | | |
|------------------------------|-------|-----|--------|------------|------------------------|----------------------------------|---|--------------|
| | D30 | D60 | 1D/1Ds | 10D/Kiss D | 1D Mark II/1Ds Mark II | 20D/Kiss Digital N/350D/REBEL XT | 5D/30D/Kiss Digital X/400D/REBEL Xti 1D Mark III 40D 1Ds Mark III REBELXsi/450D/Kiss X2 REBEL XS/1000D/ KISS F EOS 50D EOS 5D Mark II EOS Kiss X3 /EOS REBEL T1i /EOS 500D EOS 7D EOS-1D Mark IV EOS Kiss X4 /EOS REBEL T2i /EOS 550D | 1D Mark II N |

6. Appendix

6.1 Using the EDSDK

In order to install an application built using EDSDK on a computer where it will be executed, that computer must be set up as an environment that can execute EDSDK for the application installer.

Windows version

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Be sure to copy all EDSDK modules into the application sub folder.

Note1:

Be absolutely sure when you overwrite the old version of the library whenever a new version of EDSDK becomes available. We recommend that you copy files while comparing file versions of the library.

Note2:

Do not copy the EDSDK module to the Windows System folder or Windows folder.

Note3:

In order to connect to an EOS digital camera, the correct device driver software must be installed and a connection between the camera and the host PC must be established. (Driver software is not needed when using a camera model that performs PTP communications.) For details, see the installation method for drivers in the software installation guide included with your EOS digital camera.

Macintosh version

Be sure to copy EDSDK.framework into the application folder.

`${AppFolder}/Contents/frameworks/`

*Do not individually change or delete files in the EDSDK.framework folder.

Note1:

Be absolutely sure when you overwrite the old version of the library whenever a new version of EDSDK becomes available. We recommend that you copy files while comparing file versions of the library.

Note2:

Do not copy the EDSDK module to extension folders in addition to system folders.

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

6.2 Data Types Used by the APIs

Data types defined under EDSDK are listed in EDSDKTypes.h in C language format. This section introduces data types unique to EDSDK that are used by EDSDK APIs.

*For the most recent type definitions, see the header file EDSDKTypes.h.

6.2.1 EdsDirectoryItemInfo

This structure represents directory item information for the memory card in the camera. It is specified as an argument to EdsGetDirectoryItemInfo.

```
typedef struct tagEdsDirectoryItemInfo {
    EdsUInt32 size;
    EdsBool    isFolder;
    EdsUInt32 groupID; // Type 2 protocol standard camera
    EdsUInt32 option;  // Type 2 protocol standard camera EdsTransferOption
    EdsChar    szFileName[ EDS_MAX_NAME ];
} EdsDirectoryItemInfo;
```

6.2.2 EdsPropertyDesc

This structure represents a list of settable property data. It is specified as an argument to EdsGetPropertyDesc.

```
typedef struct tagEdsPropertyDesc {
    EdsInt32 form;
    EdsAccess access;
    EdsInt32 numElements;
    EdsInt32 propDesc[128];
} EdsPropertyDesc;
```

6.2.3 EdsPoint

This structure is generally used to represent a set of coordinates.

```
typedef struct tagEdsPoint {
    EdsInt32 x;
    EdsInt32 y;
} EdsPoint;
```

6.2.4 EdsSize

This structure generally represents the width and height of a rectangle.

```
typedef struct tagEdsSize {
    EdsInt32 width;
    EdsInt32 height;
} EdsSize;
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

6.2.5 EdsRect

This structure is generally used to indicate the coordinates of a rectangle.

```
typedef struct tagEdsRect {
    EdsPoint    point;
    EdsSize     size;
} EdsRect;
```

6.2.6 EdsImageInfo

This structure represents various information found in image data.

It is specified as an argument to EdsGetImageInfo.

```
typedef struct tagEdsImageInfo{
    EdsUInt32 width;           // image width
    EdsUInt32 height;         // image height

    EdsUInt32 numOfComponents; // number of color components in image.
    EdsUInt32 componentDepth;  // bits per sample. 8 or 16.

    EdsRect          effectiveRect; // Effective rectangles except
                                   // a black line of the image.
                                   // A black line might be in the top and bottom
                                   // of the thumbnail image.

    EdsUInt32 reserved1; // Reserved 1
    EdsUInt32 reserved2; // Reserved 2
} EdsImageInfo;
```

6.2.7 EdsTime

This structure represents the camera time or the shooting date of an image.

It is used to store kEdsPropID_DateTime property data.

```
typedef struct tagEdsTime{
    EdsUInt32 year;           // year
    EdsUInt32 month;          // month 1=January, 2=February, ...
    EdsUInt32 day;            // day
    EdsUInt32 hour;           // hour
    EdsUInt32 minute;         // minute
    EdsUInt32 second;         // second
    EdsUInt32 milliseconds;   // reserved
} EdsTime;
```

6.2.8 EdsFocusPoint

This structure represents the AF frame information of focus information.

It stores AF frame information of the kEdsPropID_FocusInfo property.

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

```
typedef struct tagEdsFocusPoint{
    EdsUInt32    valid;           // if the frame is valid.
    EdsUInt32 justFocus;         // if the frame is just focus.
    EdsRect      rect;           // rectangle of the frame.
    EdsUInt32 reserved;         // reserved
} EdsFocusPoint;
```

6.2.9 EdsFocusInfo

This structure represents focus information.
It stores kEdsPropID_FocusInfo property data.

```
typedef struct tagEdsFocusInfo {
    EdsRect      imageRect;       // rectangle of the image.
    EdsUInt32    pointNumber;     // number of frames.
    EdsFocusPoint focusPoint[128]; // each frame's description.
    EdsUInt32    executeMode;     // execute mode
} EdsFocusInfo;
```

6.2.10 EdsRational

This structure is generally used to represent fractions.
It is used with many properties such as kEdsPropID_Av and kEdsPropID_Tv.

```
typedef struct tagEdsRational {
    EdsInt32    numerator;
    EdsUInt32   denominator;
} EdsRational;
```

6.2.11 EdsSaveImageSetting

Use this structure as an argument to EdsSaveImage.

```
typedef struct tagEdsSaveImageSetting {
    EdsUInt32 JPEGQuality;       // 1 (coarse)~10 (fine)
    EdsStreamRef iccProfileStream;
    EdsUInt32 reserved ;
} EdsSaveImageSetting;
```

6.2.12 EdsPictureStyleDesc

Use this structure when retrieving picture styles.

```
typedef struct tagEdsPictureStyleDesc {
    EdsInt32    contrast;
    EdsUInt32   sharpness;
    EdsInt32    saturation;
    EdsInt32    colorTone;
    EdsUInt32   filterEffect;
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

```
        EdsUInt32      oningEffect;  
    } EdsPictureStyleDesc;
```

| Revision History/Date | | Corrections | Reviser | Remarks |
|-----------------------|--|-------------|---------|---------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

6.3 Sample Code

This sample code is written in C++.

6.3.1 SAMPLE1 From initializing to finalizing

```
void applicationRun()
{
    EdsError err = EDS_ERR_OK;
    EdsCameraRef camera = NULL;
    bool isSDKLoaded = false;

    // Initialize SDK
    err = EdsInitializeSDK();
    if(err == EDS_ERR_OK)
    {
        isSDKLoaded = true;
    }

    // Get first camera
    if(err == EDS_ERR_OK)
    {
        err = getFirstCamera (&camera);
    }

    // Set event handler
    if(err == EDS_ERR_OK)
    {
        err = EdsSetObjectEventHandler(camera, kEdsObejctEvent_All,
                                       handleObjectEvent, NULL);
    }

    // Set event handler
    if(err == EDS_ERR_OK)
    {
        err = EdsSetPropertyEventHandler(camera, kEdsPropertyEvent_All,
                                       handlePropertyEvent, NULL);
    }

    // Set event handler
    if(err == EDS_ERR_OK)
    {
        err = EdsSetPropertyEventHandler(camera, kEdsStateEvent_All,
                                       handleSateEvent, NULL);
    }

    // Open session with camera
}
```

| Revision History/Date | Corrections | Reviser | Remarks |
|-----------------------|-------------|---------|---------|
| | | | |
| | | | |
| | | | |
| | | | |

```

if(err == EDS_ERR_OK)
{
    err = EdsOpenSession(camera);
}

/////
// do something
////

// Close session with camera
if(err == EDS_ERR_OK)
{
    err = EdsCloseSession(camera);
}

// Release camera
if(camera != NULL)
{
    EdsRelease(camera);
}

// Terminate SDK
if(isSDKLoaded)
{
    EdsTerminateSDK();
}
}

EdsError EDSCALLBACK handleObjectEvent( EdsObjectEvent event,
                                         EdsBaseRef object,
                                         EdsVoid * context)
{
    // do something

    /*
    switch(event)
    {
        case kEdsObjectEvent_DirItemRequestTransfer:
            downloadImage(object);
            break;

        default:
            break;
    }
    */

    // Object must be released
